

How to connect a car subwoofer to a home stereo

SoundCertified.com

You can connect a car subwoofer if the total Ohms load of the subwoofers used meet the min. required. You may need additional work-arounds in cases where the amp has no low-pass filter built in, insufficient power, or the subwoofer can't be wired for 8 ohms.

Example 1

Amp/receiver + two 4 ohm car subwoofers used in series

For 4 ohm car subwoofers, you can use them by connecting two in series per channel for 8 ohms total. If your stereo/amp doesn't have a low-pass crossover you'll need to add one for clear bass.

*A speaker crossover is not needed if your stereo or amp has a low-pass crossover option built in (not common).

Example 2

Amp/receiver + 4 ohm dual voice coil subwoofer wired for 8 ohms

You can use a 4 ohm dual voice coil (DVC) car subwoofer. Connect the voice coils in series for 8 ohms total. If your stereo/amp doesn't have a low-pass crossover you'll need to add one for clear bass.

Example 3

Amp/receiver + single 4 ohm subwoofer OR amp/receiver with low power: Using a mini amp

If your car subwoofer is 4 ohms (can't be wired for 8 ohms) one option is to use a small amp. This also works for home stereos without enough power or enough channels to drive a subwoofer.

You can find these with a low-pass crossover built in and enough power to drive a subwoofer well for casual music listening.

Connect to RCA jacks from the receiver. For models with no subwoofer/RCA outputs available a line-level converter can be used.

Example 4

Amp/receiver + 4 ohm dual voice coil subwoofer using a power resistor

You can use a single 4 ohm or 2 ohm car subwoofer. By adding a power resistor inline you can bring the total speaker load to a safe level for the receiver (8 ohms).

For a 4 ohm car subwoofer use a 4 ohm resistor of 25W or higher power rating. For a 2 ohm sub use a 6 ohm resistor.

NOTE: I don't recommend this way as although it's easy, you lose 1/2 or more power across the resistor since it's divided between them.
