Plant Glycobiology - a sweet world of lectins,

glycoproteins, glycolipids and glycans Els J. M. Van Damme, Nausicaä Lannoo, Cécile Albenne, Elisabeth Jamet, 2015-02-12

Plants synthesize a wide variety of unique glycan structures which play essential roles during the life cycle of the plant. Being omnipresent throughout the plant kingdom ranging from simple green algae to modern flowering plants, glycans contribute to many diverse processes. Glycans can function as structural components in the plant cell wall, assist in the folding of nascent proteins, act as signaling molecules in plant defense responses or ER stress pathways, or serve within the energy metabolism of a plant. In most cases, glycans are attached to other macromolecules to form so-called glycoconjugates, e.g. glycoproteins, proteoglycans, and glycolipids, but they can also be present as free entities residing in the plant cell. Next to the broad complex set of glycans, plants also evolved an elaborate collection of lectins or proteins with a lectin-like domain which can recognize and bind to endogenous plants' own or exogenous foreign glycans. Though still poorly understood in plants, the dynamic interactions between lectins and carbohydrate structures are suggested to be involved in gene transcription, protein folding, protein transport, cell adhesion, signaling, as well as defense responses. As such a complex and largely undetermined glycan interactome is established inside plant cells between cells and their surrounding matrix inside the extracellular matrix and even between organisms. Studying the biological roles of plant glycans will enable us to better understand plant development and physiology in order to fully exploit plants for food, feed, and production of pharmaceutical proteins. In this Research Topic, we want to provide a platform for articles describing the latest research perspectives and methodologies related to the fascinating world of plant glycobiology with a focus on following subjects: 1. Identification and characterization of plant glycans, their biosynthetic and degradation enzymes; 2. Characterization of plant lectins and glycoproteins; 3. Plant glycans in the plant's energy metabolism; 4. Role of plant glycans in plant defense signaling; 5. Use of plant lectins in pest control; 6. Plant lectins as new tools in human medicine; 7. Glyco-engineering in plants.

The Opposite of Hate Sally

Kohn, 2018-04-10. Brilliantly illustrates the immense and disarming power of changing course and driving not toward division but toward civility and mutual respect. Ms. magazine. As a progressive commentator on Fox News and now CNN, Sally Kohn has made a career out of bridging intractable political differences. In this age of dangerous partisan resentment and rising bigotry, she decided to investigate hate itself to better consider how we can stop it. With her trademark humor and humanity, Kohn introduces us to leading researchers and scientists who are exploring the evolutionary and cultural roots of hate. She travels to Rwanda, to the Middle East, and across the United States, talking with former terrorists and reformed white supremacists and even sitting down with some of her own Twitter trolls. What she discovers is surprising. All of us harbor hate, but the powerful acknowledgment that we are all in this together can lead us out of the wilderness. The opposite of hate is connection.
