Implementing Performance Assessment Michael B. Kane, Ruth

Mitchell, 2013-11-05 As the commitment to performance assessments as a strategy of reform has increased across the nation, so has the controversy surrounding the purposes, development, implementation, and effects of alternative forms of assessment. One of the first of its kind, this edited volume provides an incisive and comprehensive account of the issues pertaining to performance assessments. The 10 papers comprising the volume were originally written to establish a conceptual framework for a three-year U.S. Department of Education Office of Educational Research and Improvement-sponsored national study of performance assessments. Written by leading experts in the field, the papers explicate the central issues regarding the development, implementation, and utility of performance assessments. The topics covered by the papers include a discussion of contemporary as well as historical events in the performance assessment movement; technical characteristics of performance assessments including reliability, validity, generalizability, and calibration; conceptualization and calculation of the costs of performance assessments; the implications of performance assessments on students who have traditionally done less well in American schools, including racial and linguistic minorities; the fit between performance assessments and organizational change in education; and the utilization of performance assessment as an instrument of state policy. Readers will find the policy and technical issues covered in this volume to be useful from a variety of academic research and policy perspectives, including conceptualizing and implementing performance assessments.

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24

Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
