formation with plastic deformation and other techniques commonly used to change the shape of a workpiece. Materials forming techniques discussed in the book include extrusion, forging, rolling, drawing, sheet metal forming, microforming, hydroforming, thermoforming, and incremental forming, among others. In addition, traditional machining, non-traditional machining, abrasive machining, hard part machining, high speed machining, high efficiency machining, and micromachining are also explored, proving that forming technologies and machining can be applied to a wide variety of materials. Presents the family of manufacturing processes involved in material formation. Includes traditional and non-traditional machining methods. Consists of high quality refereed articles by researchers from leading institutions. Places special emphasis on research and development in forming materials and machining and its applications.

Advances in material engineering and mechanical engineering : selected, peer reviewed papers from the 2011 International Conference on Material Engineering and Mechanical Engineering, Wuhan, China, August 20 - 21, 2011 Liang Gao, 2011. This book provided researchers and practitioners with the opportunity of highlighting current research directions and novel applications in materials engineering and mechanical engineering. The topics covered by the papers include functional materials, structural materials, composite materials, automotive engineering, manufacturing processes. It will be a useful reference work for engineers and academics worldwide who are interested in these topics. Review from Book News Inc. The conference as a whole highlights connections between research in materials and research in mechanics, but some of the 25 individual papers do as well. The topics include structural information of barium hexaferrite and strategies for its syntheses, simulating fatigue crack propagation behavior based on low cycle fatigue, critical damage, impact resistance, and energy absorption of functionally graded cellular structures, characterizing duplex treated coating fabricated by laser cladding and active screen plasma nitriding, and integrating uncertainty in the process of prognostics for electronics.
