Solving Vibration Analysis Problems Using MATLAB Rao V. Dukkipati, 2007

Solving Engineering Vibration Analysis Problems using MATLAB book is designed as an introductory undergraduate or graduate course for engineering students of all disciplines. Vibration analysis is a multidisciplinary subject and presents a system dynamics methodology based on mathematical fundamentals and stresses physical system modeling. The classical methods of vibration analysis in engineering are covered: matrix analysis, Laplace transforms, and transfer functions. The numerous worked examples and unsolved exercise problems are intended to provide the reader with an awareness of the general applicability of vibration analysis problems using MATLAB. An extensive bibliography to guide the student to further sources of information on vibration analysis using MATLAB is provided at the end of the book. All end-of-chapter problems are fully solved in the Solution Manual available only to instructors.

Structural Dynamics of Earthquake Engineering S

Rajasekaran, 2009-05-30 Given the risk of earthquakes in many countries, knowing how structural dynamics can be applied to earthquake engineering of structures both in theory and practice is a vital aspect of improving the safety of buildings and structures. It can also reduce the number of deaths and injuries and the amount of property damage. The book begins by discussing free vibration of single degree of freedom (SDOF) systems, both damped and undamped, and forced vibration harmonic force of SDOF systems. Response to periodic dynamic loadings and impulse loads are also discussed, as are two degrees of freedom linear system response methods and free vibration of multiple degrees of freedom. Further chapters cover time history response by natural mode superposition, numerical solution methods for natural frequencies and mode shapes, and differential quadrature transformation and Finite Element methods for vibration problems. Other topics such as earthquake ground motion response spectra and earthquake analysis of linear systems are discussed. Structural dynamics of earthquake engineering theory and application using Mathematica and Matlab provides civil and structural engineers and students with an understanding of the dynamic response of structures to earthquakes and the common analysis techniques employed to evaluate these responses. Worked examples in Mathematica and Matlab are given. Explains the dynamic response of structures to earthquakes including periodic dynamic loadings and impulse loads. Examines common analysis techniques such as natural mode superposition, the finite element method, and numerical solutions. Investigates this important topic in terms of both theory and practice with the inclusion of practical exercises and diagrams.
