held at the Institut d'Etudes Scientifiques de Cargèse France September 3-9 1993 The first aim of this conference was to gather and summarize the work of the European Bifurcation Theory Group after two years of existence the EBTG links European laboratories in five countries via an EC grant Thanks to a NATO ARW grant the conference developed into an international meeting on bifurcation theory and dynamical systems with the participation of leading specialists not only from Europe but also from overseas countries Canada USA South America It was a great satisfaction to notice the active and quite enthusiastic participation of many young scientists This is reflected in the present book for which many contributors are PhD students or post doc researchers Although several big themes bifurcation with symmetry low dimensional dynamics dynamics in EDP's applications are present in these proceedings we have divided the book into corresponding parts In fact these themes overlap in most contributions which seems to reflect a general tendency in nonlinear science I am very pleased to thank for their support the NATO International Exchange Scientific Program as well as the EEC Science Program which made possible the success of this conference

Shapes and Dynamics of Granular Minor Planets Ishan Sharma,2016-11-01 This book develops a general approach that can be systematically refined to investigate the statics and dynamics of deformable solid bodies These methods are then employed to small bodies in the Solar System With several space missions underway and more being planned interest in our immediate neighbourhood is growing In this spirit this book investigates various phenomena encountered in planetary science including disruptions during planetary flybys equilibrium shapes and stability of small rubble bodies and spin driven shape changes The flexible procedure proposed here will help readers gain valuable insights into the mechanics of solar system bodies while at the same time complementing numerical investigations The technique itself is built upon the virial method successfully employed by Chandrasekhar 1969 to study the equilibrium shapes of spinning fluid objects However here Chandrasekhar's approach is modified in order to study more complex dynamical situations and include objects of different rheologies e.g granular aggregates or rubble piles The book is largely self contained though some basic familiarity with continuum mechanics will be beneficial
