Earthquake Geotechnical Engineering Mohamed A. Sakr, Atilla Ansal, 2012-03-20 Geotechnical Earthquake Engineering and Soil Dynamics as well as their interface with Engineering Seismology Geophysics and Seismology have all made remarkable progress over the past 15 years mainly due to the development of instrumented large scale experimental facilities to the increase in the quantity and quality of recorded earthquake data to the numerous well documented case studies from recent strong earthquakes as well as enhanced computer capabilities One of the major factors contributing to the aforementioned progress is the increasing social need for a safe urban environment large infrastructures and essential facilities The main scope of our book is to provide the geotechnical engineers geologists and seismologists with the most recent advances and developments in the area of earthquake geotechnical engineering seismology and soil dynamics

Coupled Thermo-Hydro-Mechanical-Chemical Processes in Geo-systems Ove Stephansson, John Hudson, Lanru Jing, 2004-11-03 Among the most important and exciting current steps forward in geo engineering is the development of coupled numerical models They represent the basic physics of geo engineering processes which can include the effects of heat water mechanics and chemistry Such models provide an integrating focus for the wide range of geo engineering disciplines The articles within this volume were originally presented at the inaugural GeoProc conference held in Stockholm and contain a collection of unusually high quality information not available elsewhere in an edited and coherent form This collection not only benefits from the latest theoretical developments but also applies them to a number of practical and wide ranging applications Examples include the environmental issues around radioactive waste disposal deep in rock and the search for new reserves of oil and gas *Mine Planning and Equipment Selection 1998* Raj K. Singhal, 1998-01-01 This work

details the findings of the 7th International Conference on Mine Planning and Equipment Selection of 1998 held in Calgary Topics include design and planning of surface and underground mines geotechnical stability in surface and underground mines and mining and the environment **Landslides and Engineered Slopes. From the Past to the Future, Two Volumes + CD-ROM** Zuyu Chen,Jian-Min Zhang,Ken Ho,Fa-Quan Wu,Zhong-Kui Li,2008-06-11 270 Expert contributions on aspects of landslide hazards encompassing geological modeling and soil and rock mechanics landslide processes causes and effects and damage avoidance and limitation strategies Reference source for academics and professionals in geo mechanical and geo technical engineering and others involved with research des *The Second Half Century of Rock Mechanics, Three Volume Set* Luis Ribeiro e Sousa,Claudio Olalla,N. Grossmann,2007-08-05 Forty one years ago the International Society for Rock Mechanics ISRM held its 1st International Congress in Lisbon Portugal In July 2007 the 11th ISRM Congress returned to Lisbon where the Portuguese Geotechnical Society SPG the Portuguese National Group of the ISRM hosted the meeting The Second Half Century of Rock Mechanics comprises *Optimization of Multistage Hydraulic Fracturing Treatment for Maximization of the Tight Gas Productivity* Mengting Li,2018-12-17 Hydraulic fracturing is essential technology for the development of unconventional resources such as tight gas So far there are no numerical tools which can optimize the whole process from geological modeling hydraulic fracturing until production simulation with the same 3D model with consideration of the thermo hydro mechanical coupling In this dissertation a workflow and a numerical tool chain were developed for design and optimization of multistage hydraulic fracturing in horizontal well regarding a maximum productivity of the tight gas wellbore After the verification a full 3D reservoir model is generated based on a real tight gas field in the North German Basin Through analysis of simulation results a new calculation formula of FCD was proposed which takes the proppant position and concentration into account and can predict the gas production rate more accurately However not only FCD but also proppant distribution and hydraulic connection of stimulated fractures to the well geological structure and the interaction between fractures are determinant for the gas production volume Through analysis the numerical results of sensitivity analysis and optimization variations there is no unique criterion to determine the optimal number and spacing of the fractures it should be analyzed firstly in detail to the actual situation and decided then from case to case Numerical Methods in Geotechnical Engineering Thomas Benz,Steinar Nordal,2010-05-25 Numerical Methods in Geotechnical Engineering contains 153 scientific papers presented at the 7th European Conference on Numerical Methods in Geotechnical Engineering NUMGE 2010 held at Norwegian University of Science and Technology NTNU in Trondheim Norway 2 4 June 2010 The contributions cover topics from emerging research to engineering pra
