Conceived as the meanings that individuals attach to their selves a substantial stockpile of theory related to identities  
accumulated across the arts social sciences and humanities over many decades continues to nourish contemporary research  
on self identities in organizations In times which are more reflexive narcissistic and fluid the identities of participants in  
organizations are increasingly less fixed and less certain making identity issues both more salient and more interesting  
Particular attention has been given to processes of identity construction often styled identity work Research has focused on  
how why and when such processes occur and their implications for organizing and individual group and organizational  
outcomes This has resulted in a burgeoning stream of research from discursive dramaturgical symbolic socio cognitive and  
psychodynamic perspectives that most often casts individuals efforts to fabricate identities as intentional relational and  
consequential Seemingly intractable debates centred on the nature of identities their relative stability or fluidity whether  
they are best regarded as coherent or fractured positive or not and how they are fabricated within relations of power  
combined with other conceptual issues continue to invigorate the field However these debates have also led to some  
scepticism regarding the future potential of identities research Yet as the chapters in this Handbook demonstrate there are  
considerable grounds for optimism that identity as root metaphor nexus concept and means to bridge levels of analysis has  
significant potential to generate multiple compelling streams of theorizing in organization and management studies
