What two changes would you expect in tube A after 2 hours? _____

Why did they dry each piece of potato before weighing? _____

The potato in tube B did not change, give one conclusion from this observation? _____

Active Transport

This paragraph is about moving substances by active transport. Complete the paragraph using the words from the box.

low	mitochondria	energy	high
	respiration	ATP	

Active transport allows movement of substances from areas of _____ concentration to areas of _____ concentration.

It requires the breakdown of _____ to provide the _____ for active transport.

This is provided during cell _____.

Cells that carry out lots of active transport will usually have many _____.

Name one example of where active transport is used in humans and plants.

Meiosis

Meiosis is the process by which body cells divide. Each cell divides to produce two daughter cells, which are genetically identical to each other.

A cell cycle has four stages shown in the numbered images on the left. Label the images using the following names.

DNA replication **movement of chromosomes**
cytokinesis **growth of daughter cells**

Number the following sentences to describe the process of mitosis. The first one has been done for you.

	Chromosomes align across the centre of the cell
	Nuclear membranes form
1	A cell grows in size and mass and chromosomes are replicated
	One copy of each chromosome moves to opposite ends of the cell
	The cell membrane and cytoplasm divide
	The nuclear membrane breaks down

Cell Differentiation

During the development of a multicellular organism, cells differentiate. What does this mean?

Match the specialised cell with the correct adaptation and function.

Cell	Adaptation	Function
Ciliated cell	Can expand	Move mucus for haemoglobin molecules
Palisade cell	Contains many chloroplasts	photosynthesis
Sperm cell	Has the structure in the surface	Swimming around
