More and more state of the art CT PET and MRI imaging techniques are being applied to tumor imaging and new interdisciplinary field such as MR LINAC is booming. We feel there's an urgent need to organize a Research Topic to highlight the application of AI and imaging for various oncology branches such as radiation therapy as we are witnessing an accelerated integration of imaging and therapy to improve the care of cancer patients. Imaging has also been the backbone of the oncology world. It is used for diagnosis as well as planning. MRI has a superior soft tissue contrast but lacks the electron density information for the dose calculation alternative approaches use synthetic CT for dose calculation. The development of the MRI guided system and online adaptation can be considered as the bridge between many specialties starting from learning about MRI safety by the therapy physicist to the use of AI for robust planning. Active research is done to improve the images advanced MRI techniques.
