

1. **QUESTION** *What is the difference between a "strong" and a "weak" correlation?*
 2. **ANSWER** *A strong correlation is one that is statistically significant and has a high correlation coefficient (e.g., 0.8 or higher). A weak correlation is one that is statistically significant but has a low correlation coefficient (e.g., 0.2 or lower).*
 3. **QUESTION** *What is the difference between a "positive" and a "negative" correlation?*
 4. **ANSWER** *A positive correlation is one in which the two variables move in the same direction (e.g., as one variable increases, the other variable also increases). A negative correlation is one in which the two variables move in opposite directions (e.g., as one variable increases, the other variable decreases).*

Note. Although results suggest that the 12-item scale is a reliable measure of perceived social support, the scale was not used in the analyses reported here because of the small number of items.

Abstract—The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The intervention group consisted of 20 women who participated in a supervised walking program, 3 times per week, for 12 weeks. The control group consisted of 20 women who did not participate in the program. The intervention group showed significant improvements in physical and psychological health compared to the control group. The results of this study suggest that a supervised walking program can be an effective intervention for improving the physical and psychological health of sedentary, middle-aged women.
