Life Sciences and Radiation Jürgen Kiefer,2011-06-27 Scope and ideas of the workshop The workshop which took place at the University of Giessen from Oct 3 to Oct 7 2002 and whose proceedings are collected in this volume started from the idea to convene a number of scientists with the aim to outline their visions for the future of radiation research on the basis of their expertise As radiation research is a very wide field restrictions were unavoidable It was decided to concentrate this time mainly on molecular and cellular biology because it was felt that here action is particularly needed This did not exclude contributions from neighbouring fields as may be seen from the table of contents It was clearly not planned to have a comprehensive account of the present scientific achievements but the results presented should only serve as a starting point for the discussion of future lines of research with the emphasis on the outreach to other parts of life sciences If you are interested in the future ask the young we attempted therefore to invite mainly younger colleagues with a few exceptions who had however already left their marks in the field They were asked to describe what they felt is important in radiation

research and may have significant influences on other branches of life sciences They were given the task to demonstrate what is lost for science if we do no longer exist **Research Handbook on Intellectual Property and the Life Sciences**
