Learning

from Dynamic Visualization Richard Lowe, Rolf Ploetzner, 2017-05-18 This volume tackles issues arising from today's high reliance on learning from visualizations in general and dynamic visualizations in particular at all levels of education. It reflects recent changes in educational practice through which text no longer occupies its traditionally dominant role as the prime means of presenting to be learned information to learners. Specifically, the book targets the dynamic visual components of multimedia educational resources and singles out how they can influence learning in their own right. It aims to help bridge the increasing gap between pervasive adoption of dynamic visualizations in educational practice and our limited understanding of the role that these representations can play in learning. The volume has recruited international leaders in the field to provide diverse perspectives on the dynamic visualizations and learning. It is the first comprehensive book on the topic that brings together contributions from both renowned researchers and expert practitioners. Rather than aiming to present a broad general overview of the field, it focuses on innovative work that is at the cutting edge. As well as further developing and complementing existing approaches, the contributions emphasize fresh ideas that may challenge existing orthodoxies and point towards future directions for the field. They seek to stimulate further new developments in the design and use of dynamic visualizations for learning as well as the rigorous systematic investigation of their educational effectiveness. The volume sheds light on the complex and highly demanding processes of conceptualizing, developing, implementing dynamic visualizations in practice as well as challenges relating to research application perspectives. *Advancing*

STEM Education and Innovation in a Time of Distance Learning González-Lezcano, Roberto Alonso, 2022-10-21 Due to the recent global pandemic, educators of science and technology have had to pivot and adapt their delivery to create alternative virtual means of delivery. The COVID-19 pandemic has influenced a rapid change in teaching and learning in higher education. It is reshaping curriculum, demands the 21st-century digital competence challenges, and learning technologies. These changes in education are likely to endure well past the COVID-19 pandemic, making it crucial for educators to consider teaching and learning under the perspectives of digital education and innovation. *Advancing STEM Education and Innovation in a Time of Distance Learning* highlights the contemporary trends and challenges in science, technology, mathematics, and engineering education. The chapters present findings and discussions of relevant research studies and theoretical frameworks for the provision of science, technology, engineering, and technical subjects. It not only presents successful practice examples from before and during the COVID-19 pandemic but also provides useful information to assist educators in understanding the demands and challenges of digital education. Covering topics such as ethnically diverse students, foreign language learning, and mobile gamification, this premier reference source is an essential resource for educators and administrators of both K-12 and higher education, pre-service teachers, teacher educators, librarians, government officials, researchers, and academicians.

Knowledge Creation in Education Seng Chee Tan, Hyo Jeong So, Jennifer Yeo, 2014-06-12 This book arises from research conducted through Singapore's National Institute of Education on such topics as integrating knowledge building pedagogies

into Singaporean classrooms with both students and teachers across school levels from primary schools to high schools. Additionally, international scholars contribute research on theories of knowledge creation, methodological foundations of research on knowledge creation, knowledge creation pedagogies in classrooms, and knowledge creation work involving educators. The book is organized in two sections. Section A focuses on theoretical, technological, and methodological issues where sources of justification for claims are predominantly theories and extant literature, although empirical evidence is used extensively in one chapter. Section B reports knowledge creation practices in schools with teachers, students, or both; the key sources of justification for claims are predominantly empirical evidence and narratives of experience. The editor asserts that schools should focus on developing students' capacity and disposition in knowledge creation work at the same time; leaders and teachers alike should continue to develop their professional knowledge as a community. In the knowledge building vernacular, the chapters are knowledge artifacts, artifacts that not only document the findings of the editors and authors but that also mediate future advancement in this area of research work. The ultimate aim of the book is to inspire new ideas and to illuminate the path for researchers of similar interest in knowledge creation in education.

Handbook of Research on Autopoiesis and Self-Sustaining Processes for Organizational Success Pa?kowska, Ma?gorzata, 2021-01-29 Autopoietic systems show a remarkable property in the way they interact with their environment: on the one hand, building blocks and energy, including information, are exchanged with the environment, which characterizes them as open systems; on the other hand, any functional mechanisms the way the system processes, incorporates building blocks, and responds to information are totally self-determined and cannot be controlled by interventions from the environment. Information systems in an organization seem to accept the autopoietic system way of development and can help managers to understand the operations of their organizations better. The Handbook of Research on Autopoiesis and Self-Sustaining Processes for Organizational Success is an innovative reference book that presents the meaning of autopoietic organizations for social and information science, examines how autopoietic organizations are information self-producing and self-controlled, and provides a framework for its development in modern organizations. The book focuses on analyzing autopoiesis features such as self-managing, self-sustaining, self-producing, self-regulating, etc. Moreover, as the aforementioned characteristics receive a new interpretation in IT environments, the book also includes an exploration of IT solutions that enable the development of these characteristics. This book is ideal for professionals, academicians, researchers, and students working in the field of information economics and management in various disciplines such as information and communication sciences, administrative sciences, and management education, computer science, and information technology.
