

P. Sci. Waves **Key**

Put all answers on a separate sheet of notebook paper.

1. Mechanical waves need a medium through which to transport energy.
2. The particles in a surface water wave move in a circle (back & forth / up & down).
3. Waves in which the particles of medium move at right angles to the direction of the wave are transverse waves.
4. The wavelength of a wave is measured from the crest of one wave to the crest of the next.
5. If the wavelength of a given wave decreases, you know that its frequency will increase.
6. Two waves have the same frequency and wavelength, but the first wave has a greater amplitude. The energy of the first wave greater than that of the second.
7. Wave A has a greater frequency than wave B, but the amplitude of the two waves is the same. The energy of wave A is equal to that of wave B.
8. The unit for frequency is the hertz.
9. A wave will travel only as long as it has energy to carry.
10. When you squeeze together the coils of a spring and then release them, you are creating a compressional wave.
11. Waves in which the particles of the medium move only in the same direction as the motion of the wave are compressional waves.
12. You are creating a wave on a spring. If you start shaking the spring more slowly, the wavelength of the resulting wave will increase.
13. If you are lying on a raft, and you notice that the number of waves that go past the raft increases, you also find that the distance between each crest decreases.
14. Wave A carries more energy than wave B. Wave B has a smaller amplitude than wave A.
15. The energy a wave carries is measured by its amplitude.
16. For a given wave, if the frequency doubles, the wavelength is halved.
17. When a wave passes from a less dense medium to a more dense medium, the speed may change.
18. Repeating disturbances that transfer energy through matter or space are waves.

19. The two types of mechanical waves are transverse and compressional (longitudinal).
20. If the frequency of a water wave changes, its wavelength must also change.
21. The symbol λ (lambda) stands for the wavelength.

Figure 11-1

22. In Figure 11-1, identify the following structures:
B wavelength, A crest, C amplitude
23. Speed can be determined by dividing the distance traveled by the time. The water waves in a lake travel 4.4 m in 2.0 s. What is the speed of the waves? $y = d/t$ $v = 4.4\text{m} / 2.0\text{s}$ $v = 2.2\text{ m/s}$
24. An ocean wave has a frequency of 2.0 Hz with a wavelength of 10 m. What is the velocity of the wave? $v = f \times \lambda$ $v = 2.0\text{ Hz} \times 10\text{ m}$
 $v = 20\text{ m/s}$

25. The wavelength of the wave in the diagram is 1.5 m.
26. The amplitude of the above wave is 0.5 m.
27. A man is standing on the shore of a beach, up to his knees in water. Every 5 seconds a wave breaks on him. What is the period of the wave? 5 seconds

Reviews of Infrared and Millimeter Waves Kenneth J. Button, 2013-11-11 This is the first book in the series that is being called The Reviews of Infrared and Millimeter Waves The series will contain the manuscripts of invited papers from conferences on this subject This first book contains some of the invited papers from the XXth General Assembly of the Union Radio Scientifique Internationale Washington August 1981 We were asked by the URSI Committee to organize a two day symposium on millimeter and submillimeter waves This required the difficult choice of five topics which turned out to be 1 Ultra low Noise Millimeter Wave Receivers Detectors and Mixers 2 Free Electron Maser and Gyrotron 3 Measurements of Power and Noise Power 4 Complex Dielectric Properties of Solids and Liquids and 5 Radioastronomy We have not yet collected all the manuscripts and perhaps we never shall because the time and effort required to prepare a comprehensive review manuscript works a hardship on research scientists who are already overburdened we are particularly grateful therefore to the authors who have worked so hard to contribute the chapters to this book The first four chapters contribute to the timely topic of detectors mixers and receivers These authors Tucker Feldman Rudner Okamura Hogg and their well known colleagues have been among the leaders in this exciting emerging field for the past few years The fifth chapter by Sakai and Genzel is the most comprehensive treatment of the metal mesh filter science that can be found in one place *Applied Mechanics Reviews*, 1974
