Enterprise Service Bus David Chappell, 2004-06-25 This text provides an architectural overview of the Enterprise Service Bus showing how it can bring the task of integration of enterprise application and services built on J2EE NET C C and other legacy environments into the reach of everyday IT professionals

Enterprise Service Bus David A Chappell, 2004-06-25

Large IT organizations increasingly face the challenge of integrating various web services applications and other technologies into a single network The solution to finding a meaningful large scale architecture that is capable of spanning a global enterprise appears to have been met in ESB or Enterprise Service Bus Rather than conform to the hub and spoke architecture of traditional enterprise application integration products ESB provides a highly distributed approach to integration with unique capabilities that allow individual departments or business units to build out their integration projects in incremental digestible chunks maintaining their own local control and autonomy while still being able to connect together each integration project into a larger more global integration fabric or grid Enterprise Service Bus offers a thorough introduction and overview for systems architects system integrators technical project leads and CTO CIO level managers who need to understand assess and evaluate this new approach Written by Dave Chappell one of the best known and authoritative voices in the field of enterprise middleware and standards based integration the book drills down into the technical details of the major components of ESB showing how it can utilize an event driven SOA to bring a variety of enterprise applications and services built on J2EE NET C C and other legacy environments into the reach of the everyday IT professional With Enterprise Service Bus readers become well versed in the problems faced by IT organizations today gaining an understanding of how current technology deficiencies impact business issues Through the study of real world use cases and integration patterns drawn from several industries using ESB including Telcos financial services retail B2B exchanges energy manufacturing and more the book clearly and coherently outlines the benefits of moving toward this integration strategy The book also compares ESB to other integration architectures contrasting their inherent strengths and limitations If you are charged with understanding assessing or implementing an integration architecture Enterprise Service Bus will provide the straightforward information you need to draw your conclusions about this important disruptive technology

Evolutionary Based Solutions for Green Computing

Samee Ullah Khan, Joanna Kołodziej, Juan Li, Albert Y. Zomaya, 2012-08-14 Today's highly parameterized large scale distributed computing systems may be composed of a large number of various components computers databases etc and must provide a wide range of services The users of such systems located at different geographical or managerial network cluster may have a limited access to the system's services and resources and different often conflicting expectations and requirements Moreover the information and data processed in such dynamic environments may be incomplete imprecise fragmentary and overloading All of the above mentioned issues require some intelligent scalable methodologies for the management of the whole complex structure which unfortunately may increase the energy consumption of such systems An optimal energy utilization has reached to a point that many information technology IT managers and corporate executives are all up in arms to identify scalable solution that can reduce electricity consumption so that the total cost of operation is minimized of their respective large scale computing systems and simultaneously improve upon or maintain the current throughput of the system This book in its eight chapters addresses the fundamental issues related to the energy usage and the optimal low cost system design in high performance green computing systems The recent evolutionary and general metaheuristic based solutions for energy optimization in data processing scheduling resource allocation and communication in modern computational grids cloud and network computing are presented along with several important conventional technologies to cover the hot topics from the fundamental theory of the green computing concept and to describe the basic architectures of systems This book points out the potential application areas and provides detailed examples of application case studies in low energy computational systems The development trends and open research issues are also outlined All of those technologies have formed the foundation for the green computing that we know of today
