The Lean Education Manifesto Arran Hamilton, John Hattie, 2022-03-30 The global expansion of education is one of the greatest successes of the modern era More children have access to schooling and leave with higher levels of learning than at any time in history However 250 million children in developing countries are still not in school and 600 million attend but get little out of it a situation further exacerbated by the dislocations from COVID 19 In a context where education funding is stagnating and even declining Arran Hamilton and John Hattie suggest that we need to start thinking Lean and explicitly look for ways of unlocking more from less Drawing on data from 900 systematic reviews of 53 000 research studies from the perspective of efficiency of impact they controversially suggest that for low and middle income countries Maybe pre service initial teacher training programs could be significantly shortened and perhaps even stopped Maybe teachers need not have degree level qualifications in the subjects they teach and they might not really need degrees at all Maybe the hours per week and years of schooling that each child receives could be significantly reduced or at least not increased Maybe learners can be taught more effectively and less resource intensively in mixed age classrooms with peers tutoring one another Maybe different approaches to curriculum instruction and the length of the school day might be more cost effective ways of driving up student achievement than hiring extra teachers reducing class sizes or building more classrooms Maybe school based management public private partnerships and performance related pay are blind and expensive alleys that have limited influence or impact on what teachers actually do in classrooms This groundbreaking and thought provoking work also identifies a range of initiatives that are worth starting It introduces the Learning to GO L D methodology to support school
