The Routledge Handbook of Global Sustainability Education and Thinking for the 21st Century Michele

John, 2025-02-20 This Handbook emerges as a pivotal resource in underscoring the important role of sustainability education in catalysing a global shift toward sustainable development. It articulates the need for a profound transformation within institutional leadership and educational frameworks to support the critical global sustainability transition. This Handbook explores sustainability thinking as a critical paradigm shift in confronting the multifaceted challenges of sustainable development. It presents an urgent case for a systemic overhaul in our approach to education in the 21st century, advocating for multidisciplinary education and holistic systems thinking in order to more successfully navigate the complexities of sustainable development. The text discusses the foundational elements of modern sustainability thought and management, including the significance of values, ethics, governance, and the pressing issues of environmental degradation and climate change. It offers an extensive transdisciplinary overview of sustainability discourse, spanning a broad array of perspectives on sustainability management and education. It provides a comprehensive introduction to the language of sustainability and a detailed examination of sustainability issues, highlighting their implications for education, training, and management development. It addresses urgent global issues such as decarbonisation, resource scarcity, population dynamics, pollution, and land degradation, emphasising the crucial role of educational initiatives in helping to mitigate these challenges. This seminal work has been developed for a diverse audience, including academics, policymakers, students, and educators, serving as a valuable tool for those wanting to comprehend complex global sustainability challenges and the paramount importance of education in supporting global sustainability in the 21st century. [From Additive Manufacturing to 3D/4D Printing 1](#)

Jean-Claude André, 2017-10-30 In 1984, additive manufacturing represented a new methodology for manipulating matter, consisting of harnessing materials and/or energy to create three-dimensional physical objects. Today, additive manufacturing technologies represent a market of around 5 billion euros per year, with an annual growth between 20 and 30%. Different processes, materials, and dimensions, from nanometer to decameter, within additive manufacturing techniques have led to 70 000 publications on this topic and to several thousand patents with applications as wide-ranging as domestic uses. Volume 1 of this series of books presents these different technologies with illustrative industrial examples. In addition to the strengths of 3D methods, this book also covers their weaknesses and the developments envisaged in terms of incremental innovations to overcome them. *Imprimer le monde* Marie-Ange Brayer, 2017 l'occasion de l'exposition *Imprimer le monde* du 15 mars au 19 juin 2017 les éditions HYX et les éditions du Centre Pompidou interrogent avec *Imprimer le monde* l'émergence dans la création artistique de ce nouvel artefact numérique imprimé en 3D. Les technologies numériques ont bouleversé la conception et la fabrication des objets, transformant la pratique des designers, des architectes et des artistes. Quel est le statut de l'auteur, le rôle de la production de ces objets non standards, les fois uniques et produits industriellement? Quel est le statut de cet objet?
