an interesting and varied program As usual we had a number of different kinds of activities in the conference program including research papers experience reports tutorials workshops panels lightning talks and posters These proceedings contain full search papers short research papers and experience reports Moreover we have also included in these proceedings the abstracts of the posters the position papers of the PhD symposium and the abstract of the panel This year we had two different program committees for evaluating research papers and experience reports Each committee included experts in the specific area This approach allowed us to better evaluate the quality of the papers and provide better suggestions to the authors to improve the quality of their contributions

*Tests and Proofs* Bernhard Beckert,Reiner Hähnle,2008-04-04 This volume contains the research papers invited papers and abstracts of tutorials presented at the Second International Conference on Tests and Proofs TAP 2008 held April 9 11 2008 in Prato Italy TAP was the second conference devoted to the convergence of proofs and tests It combines ideas from both areas for the advancement of software quality To prove the correctness of a program is to demonstrate through impeccable mathematical techniques that it has no bugs to test a program is to run it with the expectation of discovering bugs On the surface the two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on any hope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather different techniques and tools And yet the development of both approaches leads to the discovery of common issues and to the realization that each may need the other The emergence of model checking has been one of the first signs that contradiction may yield to complementarity but in the past few years an increasing number of research efforts have encountered the need for combining proofs and tests dropping earlier dogmatic views of their incompatibility and taking instead the best of what each of these software engineering domains has to offer
