Retaking Rationality Richard L. Revesz, Michael A. Livermore, 2008. Written in a clear and non-technical manner, *Retaking Rationality* gives progressive groups and the public the tools they need both to understand and to engage in the debate over the economic analysis of environmental public health and safety regulation. Since the Reagan presidency, the most important regulations affecting every American have been required to pass a cost-benefit test, but most Americans, including many professionals working for progressive institutions or elected officials, do not understand how economic analysis works. The result is that industry and conservative ideologues have twisted economic analysis so that good regulations seem to fail the cost-benefit test. This book argues that the public and progressive institutions must take up the fight over how economic analysis is conducted and gives them the knowledge they need to engage industry and conservatives about when and how economic analysis of regulation should be carried out.

The gritty and granular truth behind the wagers we make with our lives every single day and if we're unlucky just once in a lifetime. What are your chances of living through the next 24 hours? This week. This month. This decade. Will your job kill you? Your car kill you? Your spouse kill you? Will your own bad habits kill you? Or will a rogue asteroid just kill us all? Each time you lay your head on the pillow at night or set your feet on the floor come morning, you bet your life. Exactly what odds do you face 24/7? *You Bet Your Life* applies to you, the individual, the analytical approach insurance companies use to calculate risk, actuarial science. The result is a comprehensive encyclopedic real-world assessment of more than 1,000 of the risks we take every day of our all-too-finite lives, from boarding an airplane to tempting a shark attack by dipping a toe in the ocean. *You Bet Your Life* is introduced by an authoritative essay explaining how professional actuaries calculate risk and how less objective entities in government, finance, science, technology, and religion apply their own competing calculi of risk and reward.
