Part One introduces readers to manufacturing and basic manufacturing processes: metal casting, plastic molding, metal forming, ceramic processing, composite processing, heat treatment, surface finishing, welding, joining, and powder metallurgy, and their engineering analysis, mathematical modeling, followed by worked examples/solved problem. Part Two covers non-traditional machining and computer-aided manufacturing, including their mathematical modeling and the related solved problems. Finally, quality control, QC, and economic aspects of manufacturing are discussed in Part Three. Features: Presents over 320 mathematical models and 250 worked examples. Covers both conventional and non-traditional manufacturing. Includes design problems and their solutions on engineering manufacturing processes. Special emphasis on casting design and weld design in manufacturing. Offers computer-aided manufacturing, quality control, and economics of manufacturing. *The Machinery Compendium - 3rd Edition* Fibre2Fashion, 2018-10-16 The Machinery Compendium, an exclusive feature for the global textile machinery industry. The compendium would showcase Textile Machineries that are strategically innovated for future. The Machinery Compendium provides an opening to the worldwide textile machinery manufacturer's community to showcase their latest technologies and innovations. The compendiums that we at Fibre2Fashion publish from time to time do two things: simultaneously take stock of the situation and look ahead. This particular compendium on Industry 4.0 too does both, but more of the latter. The canvas is huge and like the universe itself, it is forever expanding. The term Industry 4.0 means different things to different people, and so the predictions from industry experts as well as academics and researchers differ as well. But what all agree on is that the convergence of information technology (IT) and operational technology (OT) will drive manufacturing. The next phase of industrialisation, being referred to popularly as the Fourth Industrial Revolution, will be different from the earlier ones in that it will also be about life cycles. In short, it goes beyond manufacturing. The concept itself is still new and evolving at a frenetic pace. This also makes it difficult for those in industry to go the Industry 4.0 way. Formulating strategies and implementing them needs to start with knowledge. That's where this compendium comes in. This hard-bound volume includes, among other things, vision statements from industry leaders, some best practices, and case
