**Heating, Cooling, Lighting** Norbert Lechner, 2014-10-13 Sustainable environmental control through building design

Heating Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design. By detailing the many factors that contribute to the comfort in a building, this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating, cooling, and lighting. This new fourth edition includes new information on integrated design strategies and designing for the Tropics. Resources include helpful case studies, checklists, diagrams, and a companion website featuring additional cases, an image bank, and instructor materials. Designing buildings that require less energy to heat, cool, and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems. Basic design decisions regarding size, orientation, and form have a great impact on the sustainability, cost, and comfort of a building. Heating Cooling and Lighting provides detailed guidance for each phase of a design project. Readers will understand the concept of sustainability as applied to energy sources. Review the basic principles of thermal comfort and the critical role of climate. Learn the fundamentals of solar responsive design, including active and passive solar systems as well as photovoltaics. Discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems. In sustainable design, mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself. With this in mind, designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort. Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control.

**Heating, Cooling, Lighting** Norbert M. Lechner, Patricia Andrasik, 2021-10-26 The essential guide to environmental control systems in building design. Reflecting the latest developments in codes, standards, and rating systems for energy efficiency, Heating Cooling Lighting Sustainable Design Strategies Towards Net Zero Architecture includes three new chapters: Retrofits, Best practices for efficient energy optimization in existing buildings, Integrated Design Strategies for synergizing passive and active design, Design Tools: How to utilize the best tools to benchmark a building's sustainability and net zero potential. Heating Cooling Lighting Sustainable Design Strategies Towards Net Zero Architecture is a go-to resource for practicing professionals and students in the fields of environmental systems, technology, or design, environmental design, systems, construction technology, and sustainability technology.

**Stage Lighting** Richard E. Dunham, 2015-10-30 The book's organization follows a layered approach that builds on basic principles of light as a medium. Part 1: Tools of a Lighting Designer; Part 2: Design Fundamentals; Part 3: Lighting Applications; Part 4: This presents students with a practical and logical sequence when learning basic concepts. The full spectrum of the lighting

design process is presented in detail giving students an example of how one might develop a lighting design from script analysis through concept and plot development and all the way to an opening This detailed process with a step by step design approach gives students a plan to work from which they can later modify as they mature and gain confidence as designers The text contains a more comprehensive discussion of basic technology light as a physical phenomena and methodology of designs than is found in most introductory texts bridging the gap between introductory and advanced lighting courses The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design while at the same time gaining a solid grounding in the fundamentals of lighting design Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the design approaches of theatrical lighting design The final 9 chapters cover many specialty areas of lighting design highlighting the unique and shared qualities that exist between the different aspects of these elements Discussions involve traditional entertainment areas like theatre as well as lesser known facets of the industry including film video landscape lighting retail museum lighting virtual lighting concert spectacle performances and architectural lighting Models of design tasks demonstrate the actual use and development of plots sections schedules photometrics tables and cut sheets rather than simply talking about what they are This hands on approach provides students with a firm understanding of how to actually use these tools and processes
