

PROBLEM 12.71

PROBLEM 12.71 The airplane in the previous problem is now in the horizontal position and is flying at a constant speed, 400 ft/sec, maintaining constant altitude. The pilot wishes to pull up and perform a loop.

Find: Calculate for a loop which is just a half-circle, determine the minimum altitude at which the pilot must enter the loop so as to ensure sufficient free-fall energy.

ASSUMPTIONS: No frictional forces.

SOLUTION: The free-body diagram of the airplane is shown. The forces acting on it are the weight W and the lift L . The lift L is perpendicular to the path of the airplane. The weight W is the weight of the airplane.

ASSUMPTION: The lift force is constant.

$$\begin{aligned} \text{Total } W &= \frac{1}{2} \rho V \frac{dV}{dt} = \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} = \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} \\ &= \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} \end{aligned} \quad (1)$$

The gravitational potential energy is

$$\begin{aligned} \text{Total } W &= \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} = \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} \\ &= \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt} \end{aligned} \quad (2)$$

Let: The change in kinetic energy is calculated for the vertical loop. The total energy is

$$\text{Total } W = \frac{1}{2} \rho V \frac{dV}{dt} \frac{dV}{dt}$$

Then, solving for V_1 and V_2 we get

$$\begin{aligned} V_1^2 &= \frac{2W}{\rho V} = \frac{2W}{\rho V} \\ &= \frac{2W}{\rho V} = \frac{2W}{\rho V} \\ &= \frac{2W}{\rho V} \end{aligned}$$

$$\begin{aligned} V_1 &= \sqrt{\frac{2W}{\rho V}} = \sqrt{\frac{2W}{\rho V}} \end{aligned} \quad (3)$$

For part (b), the velocity is constant.

Fundamentals Of Thermodynamics 5th Edition Solution Manual:

Fundamentals of Solidification 5th edition with Solutions Manual Wilfried Kurz, David J. Fisher, Michel Rappaz, 2023-08-23
Since the 4th 1998 edition there have been numerous crucial advances to the modelling and the basic understanding of solidification phenomena and with its linking to experimental results These topics have been incorporated into this 5th Fully Revised Edition as well as a new final chapter on microstructure selection which explains how to combine the concepts of the preceding chapters for modelling real microstructures in complex processes such as additive manufacturing This new 5th edition is of high interest to undergraduate and graduate levels and professionals With its numerous new topics also borne out by the new authorship students and teachers scientists and engineers will greatly benefit from this new book The topics are presented in the same praised manner as in previous editions readable at three levels an initial feel for the subject is obtained by consulting the figures and their detailed captions a deeper understanding of the underlying physics is found by working through the main text 15 appendices offer a detailed analysis of the various theories by providing detailed derivations of the relevant equations Particularly Novel the final chapter 8 on microstructure selection explains how to combine the concepts of the preceding chapters to model the real microstructures formed during complex processes such as additive manufacturing and the new detailed phase field appendix which opens the door to the accurate computer modelling of growth forms This edition goes with a companion Solutions Manual offering model solutions to 133 problems exercises

Thermal Design and Optimization Adrian Bejan, George Tsatsaronis, Michael J. Moran, 1995-12-12 A comprehensive and rigorous introduction to thermal system design from a contemporary perspective Thermal Design and Optimization offers readers a lucid introduction to the latest methodologies for the design of thermal systems and emphasizes engineering economics system simulation and optimization methods The methods of exergy analysis entropy generation minimization and thermoeconomics are incorporated in an evolutionary manner This book is one of the few sources available that addresses the recommendations of the Accreditation Board for Engineering and Technology for new courses in design engineering Intended for classroom use as well as self study the text provides a review of fundamental concepts extensive reference lists end of chapter problem sets helpful appendices and a comprehensive case study that is followed throughout the text Contents include Introduction to Thermal System Design Thermodynamics Modeling and Design Analysis Exergy Analysis Heat Transfer Modeling and Design Analysis Applications with Heat and Fluid Flow Applications with Thermodynamics and Heat and Fluid Flow Economic Analysis Thermoeconomic Analysis and Evaluation Thermoeconomic Optimization Thermal Design and Optimization offers engineering students practicing engineers and technical managers a comprehensive and rigorous introduction to thermal system design and optimization from a distinctly contemporary perspective Unlike traditional books that are largely oriented toward design analysis and components this forward thinking book aligns itself with an increasing number of active designers who believe that more effective system oriented design methods are needed Thermal Design and

Optimization offers a lucid presentation of thermodynamics heat transfer and fluid mechanics as they are applied to the design of thermal systems. This book broadens the scope of engineering design by placing a strong emphasis on engineering economics, system simulation and optimization techniques. Opening with a concise review of fundamentals, it develops design methods within a framework of industrial applications that gradually increase in complexity. These applications include, among others, power generation by large and small systems and cryogenic systems for the manufacturing chemical and food processing industries. This unique book draws on the best contemporary thinking about design and design methodology, including discussions of concurrent design and quality function deployment. Recent developments based on the second law of thermodynamics are also included, especially the use of exergy analysis, entropy generation minimization and thermoeconomics. To demonstrate the application of important design principles, a single case study involving the design of a cogeneration system is followed throughout the book. In addition, *Thermal Design and Optimization* is one of the best newsources available for meeting the recommendations of the Accreditation Board for Engineering and Technology for more design emphasis in engineering curricula. Supported by extensive reference lists, end of chapter problem sets and helpful appendices, this is a superb text for both the classroom and self study and for use in industrial design development and research.
