

This illustration gives a good sense of the steering and throttling you'll have to input to keep your car drifting. When snapping the car from its full drift angle in one direction to full drift in the opposite direction, be prepared for the rear end to come around with more force than when initiating a drift from straight-ahead running. Give yourself plenty of space as you master your technique so you don't slap a curb or something equally immobile!

**1** Steer hard into the turn to initiate a slide, then countersteer before the car loops out.

**2** Continue countersteering to maintain the slide. It's a balancing act!

**3** Now you're setting up for the next turn. The goal is to drift all the way through without straightening out for more than a moment as the rear end swings around.

**4** You'll have burned off some speed by now, so be prepared to pin the throttle to keep the rear wheels slipping. Traction kills drift!

**5** Here's where it gets tricky. Keeping the rear end sliding through turns is relatively easy, but drifting down a straight is tough. As you lose momentum, the car will straighten out, but you'll be surprised how long you can hang it out. Good luck!
