Gallagher,Douglas Paul,2017-03-22 In a previous volume ICT Energy Concepts Towards Zero Power ICT referenced below as Vol 1 we addressed some of the fundamentals related to bridging the gap between the amount of energy

required to operate portable mobile ICT systems and the amount of energy available from ambient sources The only viable solution appears to be to attack the gap from both sides i e to reduce the amount of energy dissipated during computation and to improve the efficiency in energy harvesting technologies In this book we build on those concepts and continue the discussion on energy efficiency and sustainability by addressing the minimisation of energy consumption at different levels across the ICT system stack from hardware to software as well as discussing energy consumption issues in high performance computing HPC data centres and communication in sensor networks This book was realised thanks to the contribution of the project Coordinating Research Efforts of the ICT Energy Community funded from the European Union under the Future and Emerging Technologies FET area of the Seventh Framework Programme for Research and Technological Development grant agreement n 611004

**Charge Density and Structural Characterization of Thermoelectric Materials R.**

Saravanan,2016-06-01 Thermoelectric materials permit the direct conversion of temperature differences into electric energy and vice versa They are therefore of highest technological interest in applications such as solid state coolers waste heat recovery sensors and detectors and power generators including remote power generation Thermoelectric materials are often called environmentally green and for good reasons Not only can they help generate electrical energy from waste gases as they are generated in such processes as home heating industrial fabrication and automotive motion In cooling applications they eliminate the use of chemical refrigerant gases Moreover as thermoelectric conversion devices have no moving parts they operate silently and have a very long life expectancy The only current drawback of these devices is their poor efficiency Scientists all over the world are therefore studying the structural thermoelectric charge density and magnetic properties of the most promising types of these materials at the atomic and electronic level In addition to providing an introduction to the field the main objective of this book is to present the results of the growth and structural characterization of thermoelectric materials that are of high current interest including Mg<sub>2</sub>Si PbTe Bi<sub>1-x</sub>Sb<sub>x</sub> Bi<sub>2</sub>Te<sub>3</sub> Sb<sub>2</sub>Te<sub>3</sub> Sn<sub>1-x</sub>GexTe and InSb
