The SAGE Handbook of Quantitative Methods in Psychology Roger E Millsap,Alberto Maydeu-Olivares,2009-07-23 I often wonder to myself whether the field needs another book handbook or encyclopedia on this topic In this case I think that the answer is truly yes The handbook is well focused on important issues in the field and the chapters are written by recognized authorities in their fields The book should appeal to anyone who wants an understanding of important topics that frequently go uncovered in graduate education in psychology David C Howell Professor Emeritus University of Vermont Quantitative psychology is arguably one of the oldest disciplines within the field of psychology and nearly all psychologists are exposed to quantitative psychology in some form While textbooks in statistics research methods and psychological measurement exist none offer a unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area Drawing on a global scholarship the Handbook is divided into seven parts Part One Design and Inference addresses issues in the inference of causal relations from experimental and non experimental research along with the design of true experiments and quasi experiments and the problem of missing data due to various influences such as attrition or non compliance Part Two Measurement Theory begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent

variables in item response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis

Handbook of Simulator-Based Training Eric Farmer, John van Rooij, Johan Riemersma, Peter Jorna, 2017-03-02 Advances in simulation technology have enabled an interesting amount of training and instruction to be conducted on training simulators instead of on real systems However experiences with the procurement and use of training simulators has not always been as successful often owing to a lack of knowledge of didactics and of training programme development and also to inadequate simulator specifications The Handbook of Simulator based Training represents the first comprehensive overview of the European state of the art in simulator based training It also comprises a well founded and systematic approach to simulator based training and the specification of simulator requirements The multi disciplinary research project described in this book combines the expertise of specialists in human factors information systems system design and engineering from 23 research and industrial organizations from five countries France Germany the Netherlands Spain the UK The authors have synthesized and documented the project results to ensure that this handbook provides not only many valuable guidelines but more importantly a common frame of reference It will be a key resource for the many specialists who are concerned with simulator based training researchers engineers and users military training institutes and training system development departments military staff responsible for the procurement of training devices and simulators the simulator industry the training research community and the human factors and ergonomics community
