- A **chromatogram** is a series of detector responses, sampled uniformly across a length of time. The elution of a compound results in a characteristic chromatographic peak profile.
- **Peak**: The peak is the portion of the chromatographic recording of the detector response when a single component is eluted from the column. If separation is incomplete, two or more components may be eluted as one unresolved peak.
- **Integration** is the process of calculating an area that is bounded in part or in whole by a curved line. The goal of chromatographic peak integration is to obtain retention times, heights, and areas of these peaks.

Manual for HPLC Ramu BANDAMEEDI, Saibaba SV, Chittela BABU, 2018-02 This text is intended to be a guide for both the novice to preparative HPLC and as an aid to the chemical engineer planning to introduce this black art into the industrial environment The first question to ask is What is preparative To many the isolation of a few grams of an extremely potent molecule may be considered as largescale In some instances 50 g of a vaccine will supply the annual market for a particular disease state In more traditional drug therapies a few tonne may be more typical The second question to be answered is What is HPLC This abbreviation is often derived from the term High Performance Liquid Chromatography though the term High Pressure Liquid Chromatography is often preferred since high performance can also be achieved at low pressure Just to confuse the issue is this the pressure created by the resistance to liquid flow through the column or the pressure at which the column is packed
