Charlene E. Beckmann,Denisse R. Thompson,Rheta N. Rubenstein,2009-11-02 Too many high school students faced with
mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to
pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their
college and career options Thus high school mathematics teachers have the responsibility to help students recognize the
value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball
and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know
mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are
integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from
the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights
into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many
other texts that you have used It integrates both content and pedagogy to help you develop and build your own
understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental
mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such
flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book
you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning
community and build a professional network that will be a valuable resource during your professional career Hopefully you
will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such
learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help
teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1
and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions
Q for students expected and observed student responses R and teacher support S in the form of additional just enough
questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and
learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson
planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans
