Systems thinking: strengthening health

systems in practice Kara Durski, Karl Blanchet, Aku Kwamie, Maria Del Rocio Saenz, 2023-12-12 As health systems all over the world not only recover from COVID 19 but learn to adapt to contexts of increasing uncertainty amidst persistent challenges it is clear that systems thinking has never been needed more Systems thinking is an approach to problem solving that views problems as part of a wider dynamic system It recognizes and prioritizes the understanding of linkages relationships interactions and interdependencies among the components of a system that give rise to the system's observed behaviour Systems thinking is a philosophical frame and it can also be considered a method with its own tools Identifying ways in the short and long term which strengthen health systems is critical and applied systems thinking offers opportunities to do this Systems thinking is often considered to be a field a discipline a philosophical approach and a set of tools and methods and can be defined as a way to understand and improve complex issues and situations Despite broad consensus that systems thinking is important in health systems strengthening it remains underutilized by researchers public health practitioners and health decision makers Further a gap remains in the translation from concept to policy **Addressing**

Epistemic Injustice in Mental Health Karen Newbigging, Anthony Salla, Ulla-Karin Schön, Colin King, 2024-03-20 Epistemic injustice was conceptualized by Fricker as a form of social injustice which occurs when people's authority as a knower is ignored dismissed or marginalized It is attracting increasing interest in the mental health field because of the asymmetries of power between people using mental health services and mental health professionals People experiencing mental health distress are particularly vulnerable to epistemic injustice as a consequence of deeply embedded social stigma negative stereotyping and assumed irrationality This is amplified by other forms of stereotyping or structural discrimination including racism misogyny and homophobia Consequently individual testimonies may be discounted as both irrational and unreliable Epistemic injustice also operates systemically reflecting social and demographic characteristics such as race gender sexuality or disability or age **New Lenses on Intellectual Disabilities** Jennifer Clegg, 2020-05-21 This book gathers together recent international research in intellectual disability ID examining the diverse modes of existence that characterise living with intellectual disabilities in the 21st century Ranging from people with no speech and little mobility who need 24 hour care to people who marry or hold down jobs this book moves beyond the typical person with ID imagined by public policy healthy with mild ID and a supportive family and living in a welcoming community The book is divided into three sections The first A richer picture of people and relationships expands our understanding of different people and lifestyles associated with ID The second section Where current policies fall short finds that Supported Living provides just as mediocre a form of care as group homes and concludes that services for people with challenging behaviour are unrelated to need The contributors research identifies no effective employment support strategies as well as technological and legal changes that prevent organisations from employing people with ID With nearly a quarter of this population in poor health the contributors reflect on whether social model approaches should be allowed to trump medical considerations The third section New thinking

about well being reveals that being old poor and living alone increases health risk and that medication administration is significantly more complex for people with ID Moving beyond 20th century certainties surrounding intellectual disability this book will be of interest to those studying contemporary issues facing those living with ID as well as those studying public health policy more widely The chapters in this book were originally published in issues of the Journal of Intellectual Developmental Disability

Translating health economics research into public health action: Towards an economy of wellbeing Mariana Dyakova, Rebecca Masters, Timotej Jagric, 2024-04-08 *New Insights in the Health Benefits of Art* Olivier Beauchet, Auriane Gros, Andy Hau Yan Ho, Ian Koebner, 2024-06-11 In 2019 the World Health Organization demonstrated with a scoping review that art based activities regardless of their characteristics have promising health benefits More specifically practicing art based activities was demonstrated to contribute to core determinants of health to play a key role in health promotion and prevention especially with regard to the onset of mental illness and age related physical decline and to assist in acute and end of life care This report also underscored first a lack of robust data on art s health benefits meaning data obtained with gold standard experimental study designs i e randomized control trials and second that certain topics e g social health and populations e g older community dwellers have been underexamined In addition little is known about both the mechanisms of art s health benefits and how to implement an art based activity for health purposes in practice
