*Cell Biology and Translational Medicine, Volume 15* Kursad Turksen, 2022-05-20 Much research has focused on the basic cellular and molecular biological aspects of stem cells. Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies. However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions. This book series *Cell Biology and Translational Medicine* CBTMED as part of Springer Nature's longstanding and very successful *Advances in Experimental Medicine and Biology* book series has the goal to accelerate advances by timely information exchange. Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume. Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas. This current book is the 15th volume of a continuing series. **Cell Biology and Translational Medicine, Volume 25** Kursad Turksen, 2025-08-03 This next volume in the *Cell Biology and Translational Medicine* series continues to explore the promising applications of stem cells in regenerative medicine. The topics presented in this volume address aspects of stem cell regeneration both in health and disease. The volume looks at the roles of the interactome, secretome, genome stabilizers, epigenetic regulation, organoids and bioprinting in stem cell biology and regeneration. Additionally it highlights recent advancements in therapies for eye diseases. A goal of the series continues to be to highlight timely often emerging topics and novel approaches that can accelerate the utility of stem cells in regenerative medicine. *Essential Current Concepts in Stem Cell Biology* Beate Brand-Saberi, 2020-01-03 This textbook describes the biology of different adult stem cell types and outlines the current level of knowledge in the field. It clearly explains the basics of hematopoietic, mesenchymal and cord blood stem cells and also covers induced pluripotent stem cells. Further it includes a chapter on ethical aspects of human stem cell research which promotes critical thinking and responsible handling of the material. Based on the international masters program *Molecular and Developmental Stem Cell Biology* taught at Ruhr University Bochum and Tongji University Shanghai the book is a valuable source for postdocs and researchers working with stem cells and also offers essential insights for physicians and dentists wishing to expand their knowledge. This textbook is a valuable complement to *Concepts and Applications of Stem Cell Biology* also published in the *Learning Materials in Biosciences* textbook series. *Cell Biology and Translational Medicine, Volume 3* Kursad Turksen, 2018-11-28 Much research has focused on the basic cellular and molecular biological aspects of stem cells. **Liver Myofibroblasts** Jiri Kanta, Alena Mrkvicová, Ralf Weiskirchen, 2016-10-25 Myofibroblasts (MFB) are found in most tissues of the body. They have the matrix producing functions of fibroblasts and contractile properties that are known from smooth muscle cells. Fundamental work of the last decades has shed remarkable light on their origin, biological functions and role in disease. During hepatic injury, they fulfill manifold functions in connective tissue remodeling and wound healing, but overshooting activity of MFB on the other side induces fibrosis and cirrhosis. The present book, *Liver myofibroblasts*, contains 9 articles providing comprehensive information on hot topics of MFB. In our opening editorial, we provide a short overview of the origin of MFB and their relevance in extracellular matrix formation, which is the hallmark of hepatic fibrosis. Thereafter, leading experts in the field share their current perspectives on special topics of MFB: i) MFB in development and disease; ii) their role in hepatic fibrogenesis; and iii) promising therapies and targets that are suitable to interfere with hepatic fibrosis.
