AI and ML in Industrial Engineering: Concepts and Applications Mr. Mayur Rele, 2025-07-25 Industrial engineering has long been centred on efficiency optimisation and problem solving but with the rise of artificial intelligence AI and machine learning ML its scope has expanded into entirely new dimensions AI and ML in Industrial Engineering Concepts and Applications explores this transformation with clarity combining foundational theory with practical applications that reflect the realities of modern industry The book begins by outlining the principles of AI and ML showing how these technologies connect with data science and decision making in industrial contexts It then revisits core concepts of operations research production systems and industrial management preparing readers to see how advanced tools can enhance traditional methods Key approaches supervised unsupervised and reinforcement learning are explained in detail alongside neural networks and deep learning offering readers a strong understanding of both classical techniques and cutting edge developments Emphasis is placed on the central role of data from collection and cleaning to preparation for meaningful AI driven insights Real world applications are illustrated through predictive maintenance defect detection demand forecasting warehouse optimisation and the creation of smart factories supported by IIoT and cyber physical systems The final chapters broaden the scope addressing ethical implications privacy concerns workforce transformation and the skill sets required for the next generation of industrial engineers This balanced approach makes the book both a guide for students and a resource for professionals seeking to apply AI and ML to the evolving challenges of industrial engineering **Research**

Methodology in Management and Industrial Engineering Carolina Machado, J. Paulo Davim, 2020-03-13 This book deals with methodological issues in the field of management and industrial engineering It aims to answer the following questions that researchers face every time they look to develop their research How can we design a research project What kind of paradigm should we follow Should we develop a qualitative phenomenological research or a quantitative positivistic one What techniques for data collections can we use Should we use the entire population or a sample What kind of sampling techniques can we have This book provides discussion and the exchange of information on principles strategies models techniques applications and methodological options possible to develop in research in management and industrial engineering It communicates the latest developments and thinking on the research methodologies subject in the different areas worldwide It seeks cultural and geographic diversity in studies highlighting research methodologies that can be used in these different study areas This book has a special interest in research on important issues that transcend the boundaries of single academic subjects It presents contributions that challenge the paradigms and assumptions of individual disciplines or functions with chapters grounded in conceptual and or empirical literature The main aim of this book is to provide a channel of communication to disseminate knowledge between academics and researchers with a special focus on the management and industrial engineering fields This book can serve as a useful reference for academics researchers managers engineers

and other professionals in related matters with research methodologies Contributors have identified the theoretical and practical implications of their methodological options to the development and improvement of their different study and research areas
