

Industrial Hygiene Activities in the Public Health Service*

JAMES G. TOWNSEND, M.D., F.A.P.H.A.

*In Charge, Division of Industrial Hygiene, National Institute of Health,
U. S. Public Health Service, Bethesda, Md.*

INDUSTRIAL health is a "prime contractor" in this nation's war. Today when every disabled war worker means less planes, ships, tanks, and guns, the national industrial hygiene program assumes an A-1 priority rating. The program which was put into effect 18 months before Pearl Harbor has felt increasingly the impact of war. Basic activities have progressed smoothly and with gathering momentum. Recent developments, however, deserve special mention since they demonstrate a closer integration of industrial hygiene with the war effort. There has been, too, a growing recognition of the "essentiality" of industrial health protection on the part of war agencies and civilian groups.

The current program of industrial hygiene in the Public Health Service follows the lines recommended by the Subcommittee on Industrial Health and Medicine of the Committee on Health and Medical Care in 1940, but has been greatly expanded during the war months. The program includes recruitment and training of industrial hygiene personnel, research, aid to state and local industrial hygiene services, special services for the War Department, and a promotion of coördinated health and

medical services for the industrial population.

During the past year the number of trained professional personnel employed in federal, state, and local services has increased to 500. There are now 38 state industrial hygiene organizations, 1 county unit, 3 city units, and 2 district units covering a large city and several adjoining counties. The majority of the personnel now employed in these units has been recruited and trained by the Public Health Service and detailed to duty in state and local industrial hygiene units.

The activities of the governmental industrial hygiene units have increased greatly during the past ten months. The expansion of the war industries since Pearl Harbor has been phenomenal. The number of workers engaged in war production had doubled in September, 1942, at which time 15 million were employed in war industries as compared to 7 million in December, 1941. It is estimated that, by 1943, the total will be 17½ million. For the past two years, the work of governmental industrial hygiene services has been directed almost exclusively to the improvement of conditions in industries engaged in the production of war materials. Hence, the wartime increase in workers to be served has severely taxed the staffs and facilities of the existing units. Preliminary analysis of reports to the Division of Industrial Hygiene

* Presented before the Industrial Hygiene Section of the American Public Health Association at the Seventy-first Annual Meeting in St. Louis, Mo., October 27, 1942.
