Technology for Digital Libraries Andreas Rauber, Stavros Christodoulakis, A Min Tjoa, 2005-09-27 Since its inception in 1997 the European Conference on Research and Advanced Technology for Digital Libraries ECDL has come a long way creating a strong interdisciplinary community of researchers and practitioners in the field of digital libraries. We are proud to present the proceedings of ECDL 2005 the ninth conference in this series which following Pisa 1997 Heraklion 1998 Paris 1999 Lisbon 2000 Darmstadt 2001 Rome 2002 Trondheim 2003 and Bath 2004 took place on September 18-23 2005 in Vienna Austria. ECDL 2005 featured separate calls for paper and poster submissions resulting in 130 full papers and 32 posters being submitted to the conference. All papers were subject to a thorough peer review process with an 87 person strong Program Committee and a further 68 additional reviewers from 35 countries from basically all continents sharing the tremendous review load producing between three and four detailed reviews per paper. Based on these as well as on the discussion that took place during a one week online PC discussion phase 41 papers were finally selected for inclusion in the conference program during a 1.5 day PC meeting resulting in an acceptance rate of only 32%. Furthermore 17 paper submissions were accepted for poster presentations with an additional 13 posters being accepted based on a simplified review process of 2-3 reviews per poster from the poster submission track. Both the full papers as well as extended abstracts of the posters presented at ECDL 2005 are provided in these proceedings.

Music Similarity and Retrieval Peter Knees, Markus Schedl, 2016-05-28 This book provides a summary of the manifold audio and web based approaches to music information retrieval (MIR) research. In contrast to other books dealing solely with music signal processing it addresses additional cultural and listener centric aspects and thus provides a more holistic view. Consequently the text includes methods operating on features extracted directly from the audio signal as well as methods operating on features extracted from contextual information either the cultural context of music as represented on the web or the user and usage context of music. Following the prevalent document centered paradigm of information retrieval the book addresses models of music similarity that extract computational features to describe an entity that represents music on any level e.g. song album or artist and methods to calculate the similarity between them. While this perspective and the representations discussed cannot describe all musical dimensions they enable us to effectively find music of similar qualities by providing abstract summarizations of musical artifacts from different modalities. The text at hand provides a comprehensive and accessible introduction to the topics of music search retrieval and recommendation from an academic perspective. It will not only allow those new to the field to quickly access MIR from an information retrieval point of view but also raise awareness for the developments of the music domain within the greater IR community. In this regard Part I deals with content based MIR in particular the extraction of features from the music signal and similarity calculation for content based retrieval. Part II subsequently addresses MIR methods that make use of the digitally accessible cultural context of music. Part III addresses methods of collaborative filtering and user aware and multi modal retrieval while Part IV explores current and future
