Isizulu Paper 3 2013 Grade 10

Phyllis Katz

Isizulu Paper 3 2013 Grade 10:

Drawing for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus), A process (how plants grow over time, what happens when chemicals combine), Conceptions of what science is and who does it, Images of identity development in science teaching and learning.

Preparing Globally Minded Literacy Teachers Jan Lacina, Robin Griffith, 2019-11-15 This textbook brings together internationally renowned scholars to provide an overview of print and digital literacy instruction for pre-service teachers and teacher educators. It examines historical and cultural contexts of literacy practices around the globe and addresses issues that teachers need to consider as they teach children from diverse world cultures, languages and backgrounds. Organized into three Parts: Early Literacy, Intermediate to Adolescent Literacy and Case Studies, the text highlights key practices around the world to provide literacy educators and students with a broader view of effective practices as well as strategies for overcoming challenges faced by literacy educators worldwide. The global case studies present complex issues and allow readers to discuss what it means to be globally minded as well as how to implement best practices in literacy instruction. All chapters include consistent elements for ease of use such as vignettes, historical and cultural contexts, implications for future research and discussion questions. Grounded in current research and theory, this book is designed for foundational courses in literacy education and literacy methods as well as courses in comparative and multicultural education.
