LS-100

Main Features

Flareless SLR optical system for accurate measurements

The SLR program-reflex optical system allows precise aiming and ensures that the viewfinder shows the exact area to be measured. The optical system is also virtually flareless, eliminating the influence of light from outside the measurement area.

Narrow acceptance angle for measurements of small apertures

Acceptance angles of only 1° for LS-100 and 1/2° for LS-110 allow accurate measurements of small specimen areas. In addition, optional close-up lenses can be used to measure areas as small as ø1.3 mm when using LS-100 and ø1.4 mm when using LS-110.

User calibration and color-correction functions

To increase the versatility of the LS-100 and LS-110, both models are equipped with user calibration and color correction functions. The user calibration function allows the meter to be calibrated to a user-selected standard instead of the preset Konica Minolta standard. The function can also be used to standardize the response of several meters. The color correction function allows the response of the meter to be adjusted when measuring colored specimens.

Luminance ratio and peak luminance measurements

In addition to measurements of the present luminance, the LS-100 and LS-110 can also determine the percent ratio of the measured luminance to a luminance value stored in memory as well as the peak luminance or luminance ratio measured.

RS-232C data communication

Use of the built-in RS-232C interface allows the meter to be connected to a personal computer.

Lightweight, compact design powered by a single 9V battery for portability

Relative Spectral Response

Ideally, the relative spectral responsiveness of the luminance meter should match Y (L) of the human eye for photopic vision. As shown in the graph above, the relative spectral responsiveness of Konica Minolta Luminance Meters LS-100/LS-110 is close to the CIE spectral luminance efficiency Y (L). CIE Colorimetric Observers are referenced to 2° field of vision. The degree to which the relative spectral responsivity matches Y (L) is characterized by means of the index:

Reduction of Flare

The degree to which the influence of light from outside the defined measuring area is eliminated is an important factor in the performance of luminance meters. In Konica Minolta Luminance Meters, the flare factor is kept to below 0.1%, even 7 cm angled with extremely high luminance is just outside the meter's measuring area.

The graph at right shows the effect when a bright point is moved from A inside the measuring area to B just outside the measuring area. If the measured value at A is defined as 100%, the measured value at B would be less than 0.1%.
