Murray, 1901      **A First Course in Multivariate Statistics** Bernard Flury, 2013-03-09 My goal in writing this book has  
been to provide teachers and students of multi variate statistics with a unified treatment of both theoretical and practical  
aspects of this fascinating area The text is designed for a broad readership including advanced undergraduate students and  
graduate students in statistics graduate students in biology anthropology life sciences and other areas and postgraduate  
students The style of this book reflects my belief that the common distinction between multivariate statistical theory and  
multivariate methods is artificial and should be abandoned I hope that readers who are mostly interested in practical  
applications will find the theory accessible and interesting Similarly I hope to show to more mathematically interested  
students that multivariate statistical modelling is much more than applying formulas to data sets The text covers mostly  
parametric models but gives brief introductions to computer intensive methods such as the bootstrap and randomization  
tests as well The selection of material reflects my own preferences and views My principle in writing this text has been to  
restrict the presentation to relatively few topics but cover these in detail This should allow the student to study an area  
deeply enough to feel comfortable with it and to start reading more advanced books or articles on the same topic
