4th Battle of the Titans: Clash between Natural and the Supernatural. The Ascent of the Natural. The Crystals Series is a storyline in the form of a novel which starts from the very beginning of the creation of the Universe, traverses the whole human civilization, reaches the present and continues into the future, summarily following the evolutionary course of human civilization. In the first part of the Clash between the Supernatural and Natural, we followed the evolutionary path of life from 50 million years ago to 200 thousand years ago; we witnessed the first battles between the Supernatural and the Natural, the creation of the Balkan Peninsula, the domination of the mammals, but we followed the separate phylogenetic tree of humankind. A summary reference was made to the educational training system necessary for the development of sentient beings at the three spiritual levels: the ten faces, the three consciences, the four paths, and the five plagues that directly and indirectly impact on their lives. In the second part of the Clash between the Supernatural and Natural, 200 to 100 thousand years ago, we witness the slow-paced developmental modification of the *Homo sapiens sapiens* during which life begins to acquire full self-knowledge. The final trial and oath-taking of Zeus as the Warrior of the Light take place, as well as his efforts to take responsibility for reinstating the Natural Forces. Clashes of epic proportions: battles of the Titans and dwells between the Titans and the Olympians dominate the scene. In the 4th Battle of the Titans, we are witnessing the turning point of nature to the logical incarnation of nature with life and its rationalization by *Homo sapiens sapiens*. It is the sentient being through which the universe is trying to acquire self-knowledge and self-realization. So on the one hand, we are witnessing the undiscernible and insurmountable difficulties through which the White Crystal will eventually reach Mount Olympus in the hands of Zeus and

on the other the easiness with which the Black Crystal will reach Othrys in the hands of Cronos We are witnessing in fact the conflict between the rational and the irrational and the transition of man to the logical Man has fought hard during this transition His mind was aflame for a series of thousands of years in his effort to address his difficult and inscrutable questions At the end he came out victorious he moved on but it was a futile victory since he got carried away into metaphysical and supernatural escape routes So the metaphysical and illogical remains latent in his everyday reality and in every one of his thoughts and emerges in every difficulty Such titanic battles were fought inside the human mind

Luckhurst,C.A.

Veracini,1994-04-30 Liquid crystalline phases are now known to be formed by an ever growing range of quite diverse materials these include those of low molecular weight as well as the novel liquid crystalline polymers such phases can also be induced by the addition of a solvent to amphiphilic systems leading to lyotropic liquid crystals Irrespective of the structure of the constituent molecules these numerous liquid crystal phases are characterised by their long range orientational order In addition certain phases exhibit elements of long range positional order Our understanding both experimental and theoretical at the molecular level of the static behaviour of these fascinating and important materials is now well advanced In contrast the influence of the long range order both orientational and positional on the molecular dynamics in liquid Crystals is less well understood In an attempt to address this situation a NATO Advanced Study Institute devoted to liquid crystal dynamics was held at Cortina d'Ampezzo Italy in September 1989 This brought together experimentalists and theoreticians concerned with the various dynamical processes occurring in all liquid crystals The skills of the participants was impressively wide ranging they spanned the experimental techniques used in the study of molecular dynamics the nature of the systems investigated and the theoretical models employed to understand the results While much was learnt it was also recognised that much more needed to be done in order to advance our understanding of molecular dynamics in liquid Crystals
