**Teaching: Improving achievement and learning engagement by using classroom assessment** Paul

Spenceley,2022-01-14 Teachers simply do not have the time to do any more work Yet the pressure to improve results is ever upwards The emphasis in this book is not on doing anything extra but on doing all the everyday things that science teachers do planning lessons marking work and exams providing feedback and getting students involved in discussions or self and peer assessment in a slightly different way The book is full of simple practical formative assessment techniques and strategies based on real classroom practices repeated across the range of ages and abilities at secondary levels in a variety of schools that have been repeatedly shown to significantly improve examination results and student involvement in lessons Whether you are just about to embark on a career as a science teacher or you have been one for many years there is bound to be something here      **Assessment at 16** Keith Selkirk,2020-05-04 What students are deemed to have achieved when they

are sixteen is the measure of how successful or otherwise their progress through the system of compulsory education has been And yet despite the importance of the process there has been no clear consensus about how best to assess students at sixteen The various formal examinations which have been tried have now largely been superseded by the GCSE a common system of examining at sixteen Originally published in 1988 the book discusses the development of this system its application to the main subject areas of the curriculum and some of its innovative aspects from both a theoretical and a practical standpoint In addition it also looks at the broader aspects of assessment of pupils at the age of sixteen and how we can give a more rounded indication of their achievements and abilities by the use of profiles and records of achievement      *Learning to*
