Lovinger, 2002-02-14 Written by a panel of experts *Methods in Alcohol Related Neuroscience Research* not only provides information of a technical nature but also gives an overview of the many areas in investigating the effects of alcohol on the brain It gives technical guidance for investigators doing research at the molecular cellular systems and behavioral levels These techniques include a wide variety of approaches ranging from gene mapping and examination of molecular interactions of alcohol at the sub cellular level to recording of neural activities in freely behaving animals and imaging alcohol effects on the living human brain *Brain Mapping: The Methods* Arthur W. Toga, John C. Mazziotta, 2002-10-06 Investigation of the functional architecture of the human brain using modern noninvasive imaging techniques is a rapidly expanding area of research A proper knowledge of methodology is needed to appreciate the burgeoning literature in the field This timely publication provides an excellent catalogue of the main techniques The authors offer an invaluable analysis of mapping strategies and techniques providing everything from the foundations to the major pitfalls and practical applications of the modern techniques used in neuroimaging Contains over 1000 full color pages with more than 200 color figures Spanning the methodological gamut from the molecular level to the whole brain while discussing anatomy physiology and pathology as well as their integration *Brain Mapping The Methods* Second Edition brings the reader a comprehensive well illustrated and entirely readable description of the methods for brain mapping Drs Toga and Mazziotta provide everything from the foundations to the major pitfalls and practical applications of the technique by assembling an impressive group of experts all widely known in their field who contribute an outstanding set of chapters *Manual on Membrane Lipids* Rajendra Prasad, 2013-11-11 Although previously thought to be merely passive structural components membrane lipids have recently been found to be actively involved in cellular transport and signal transduction processes Clear protocols for the study of membrane lipid properties cellular transport or signal transduction are presented in this manual Following a short introduction to membrane lipids techniques for the isolation and extraction of membrane fractions the analysis of the lipid composition lipid turnover and the involvement in signal transduction as well as the preparation of liposomes are described *Human Stem Cell Manual* Suzanne Peterson, Jeanne F. Loring, Robin L. Wesselschmidt, Philip H. Schwartz, 2011-10-10 Stem cells are self replicating and undifferentiated meaning their function is not yet cell tissue or organ specific Due to the unique nature of these cells research into their biology and function holds great promise for therapeutic applications through replacement or repair of diseased and damaged cells This reader friendly manual provides a practical hands on guide to the culture of human embryonic and somatic stem cells By presenting methods for embryonic and adult lines side by side the authors lay out an elegant and unique path to understanding the science of stem cell practice The authors begin with a broad based introduction to the field and also review legal and regulatory issues and patents Each experimental strategy is presented with an historical introduction detailed method discussion of alternative
