

Research Design

INTRODUCTION

Research is a critical, careful, scholarly, scientific, positive, exhaustive investigation or an organized and systematic inquiry of facts or answer to questions and solution to the problems. The term 'research design' means drawing a tentative outline, a blue print and a scheme, planning or arranging a strategy of conducting research with a through knowledge about research methodology. It can enable certain guidelines and procedure to pursue authentic and relevant investigation with a professional standard. It is a logical and systematic plan for collecting data, measurement and analysis of data and prepared for a research study. The research proposal is a written plan for a study and it reveals what the researcher intends to do. In this paper the specific emphasis is given to the 'research design' keeping in mind the 'empirical studies'[1], important concepts in research design, classify the major types of designs and an attempt is also made to present a format of a research project. Any scientific investigation must begin with some structure or plan. This structure defines the number and the type of variables to be studied and their relationship to one another. Such a structure is termed a design.

WHAT IS RESEARCH DESIGN

Kerlinger defines 'a research design as the plan, structure and strategy of investigation purporting to answer research questions and control variance'.[2] Research design provides the 'glue' that holds the research project together. A design is used to structure the research, to show how all of the major parts of the research project - the samples or groups, measures, treatments or programs, and methods of assignment- work together to try to address the central research questions. We often describe a design using a concise notation that enables us to summarize a complex design structure efficiently.[3]
