

A flock of birds is shown in flight, arranged in a circular pattern against a warm, golden sunset sky. The birds are silhouetted, and their wings are spread, creating a sense of movement. The background features a bright sun low on the horizon, casting a warm glow over the scene. The bottom of the image shows a dark, silhouetted field of tall grass or reeds.

L'Intime épistolaire (1850-1900) Jelena Jovicic, 2010-01-08 *L'Intime pistolaire 1850 1900 genre et pratique culturelle* is a study of private letters by eight Nineteenth Century French authors Flaubert Zola Sand Baudelaire Maupassant Eberhardt Bashkirtseff and Edmond de Goncourt during the period of 1850 to 1900 Through in depth analyses of these intriguing documents the book demonstrates that personal correspondences cast fresh light on the concept of intimacy in Nineteenth Century French culture Since epistolary writing implies a necessary exchange between lived experience and the written word the book s intention is also to interpret letter practice as a specific textual form with its own generic expectations and constraints which are distinct from other life writing genres such as the diary the autobiography and the memoir Divided into five chapters the study begins with a short introduction to the culture of individuality The four subsequent chapters explore the poetics of epistolary writing including significant topics the various roles of the letter writer epistolary pacts and the problem of the signature Addressing a wide range of epistolary situations including daily life health money problems love travel and even suicide notes the book also offers new critical perspectives on six of the most interesting manuscript letters that have been chosen from the examined sources **A Concordance to Marivaux's Comedies in Prose** Donald C.

Lafayette in the Age of the American Revolution—Selected Letters and Papers, 1776-1790 Le Marquis de

Lafayette, 2019-05-15 The third volume of this widely acclaimed series continues the story of Lafayette's role in the military, diplomatic and political aspects of the French American alliance as seen through the letters of Lafayette and his correspondents on both sides of the Atlantic. Among the recipients of Lafayette's letters are George Washington, the Comte de Vergennes, Samuel Adams, the Comte de Rochambeau, the Baron van Steuben, Benjamin Franklin, Alexander Hamilton, Nathanael Greene and Thomas Jefferson. At times Lafayette appears to be as proud, ambitious and headstrong as his detractors have claimed. More often he emerges as a mature and judicious leader, one who carried great weight as a principal architect of French American cooperation. The letters also show his ability to understand American attitudes toward military and civil authority and they indicate his realistic comprehension of strategy, tactics and logistics. The volume is divided into five parts, each of which is introduced by a headnote summarizing Lafayette's main activities and the broader context of revolutionary events of the period. It makes clear the tensions and disharmonies between the allies that developed during the months of military inaction and fiscal difficulties and gives us a rare look at the human side of the military effort at its highest levels.

Grand Dictionnaire Universel [du XIXe Siècle] Français: A-Z 1805-76 Pierre Larousse, 1869

An Algebraic Introduction to Complex Projective Geometry Christian Peskine, 1843 In this introduction to commutative algebra the author chooses a route that leads the reader through the essential ideas without getting embroiled in technicalities. He takes the reader quickly to the fundamentals of complex projective geometry requiring only a basic knowledge of linear and multilinear algebra and some elementary group theory. The author divides the book into three parts. In the first he develops the general theory of noetherian rings and modules. He includes a certain amount of homological algebra and he emphasizes rings and modules of fractions as preparation for working with sheaves. In the second part he discusses polynomial rings in several variables with coefficients in the field of complex numbers. After Noether's normalization lemma and Hilbert's Nullstellensatz, the author introduces affine complex schemes and their morphisms; he then proves Zariski's main theorem and Chevalley's semi-continuity theorem. Finally, the author's detailed study of Weil and Cartier divisors provides a solid background for modern intersection theory. This is an excellent textbook for those who seek an efficient and rapid introduction to the geometric applications of commutative algebra.
