L. Mittal, 2009-04-24 Superhydrophobic surfaces water contact angles higher than 150 can only be achieved by a combination of hydrophobicity low surface energy materials with appropriate surface texture In nature one can find an array of impressive and elegant examples of superhydrophobic surfaces For example on a lotus leaf rain drops bounce off after impact then entirely roll off the lotus leaf and drag along any dirt particles without leaving residues The artificial design of superhydrophobic and self cleaning surfaces has become an extremely active area of fundamental and applied research This book presents both

fundamental and applied aspects of superhydrophobic surfaces It describes also different strategies for making superhydrophobic surfaces from a large diversity of materials polymers metals and other inorganic materials composites and processes lithographic techniques electrochemical processes self assembly processes colloidal particles sol gel processes nanofilaments or simple scraping A bountiful of information is covered in this book which represents cumulative wisdom of many world renowned researchers in the fascinating and burgeoning area of superhydrophobic surfaces **Urban**
