✓ Exclusively available on IvyPanda

MySpace is a hugely successful and popular social networking website that caters to hundreds of thousands of users on a daily basis. Most popular amongst the student population, there have been growing concerns from psychological experts and parents alike regarding the perceived problems of Myspace use among impressionable kids. The main concern revolves around the possibility of Myspace being used by sexual predators on the internet due to the lax security measures at the website. Indeed, the website can be considered to have almost nonexistent security as it encourages the users to post as much personal information as they wish through the boards and blogs, site features that are easily accessible to those with predatory instincts. The reality of the situation is that Myspace has encouraged more creativity and socialization among its users due to its innovative software usage concepts. However, just like anything done in excess, too much personal information on any MySpace account can also prove to have adverse effects. In fact, according to journalist Sue K. Ellen, one can view my space in terms of necessary medication for patients with the good results outweighing the bad. She indicates that:

In the medical field, if the positive benefits outweigh the negative effects, medicine is used. Otherwise, the medicine is canceled, such as the medication known as Vioxx. Why do I mention this? Well, MySpace works the same way. It's a great tool, but if it's going to put you and your loved ones in danger, then the negative effects outweigh the benefits, leading to the conclusion that MySpace is a very dangerous place for children and teenagers to be dwelling in, and therefore must be approached at an appropriate, and serious manner.

According to Larry D. Rosen, Ph.D. although 83% of parents are concerned with their teen's use of MySpace exposing them to sexual predators, parents numbering about 75% were also concerned about the perceived social isolation of their child due to the virtual nature of the friendships they entered into. There is indeed something disconcerting about not having any face-to-face encounters with these people since the internet allows users to actually create believable facades that could prove to be detrimental to other parties once taken into the real world.

The Electronic Republic? Phillip J. VanFossen,Michael J. Berson,2008 In 1991 Lawrence Grossman wrote that a new political system is taking shape in the United States As we approach the twenty first century America is turning into an electronic republic a democratic system that is vastly increasing the people s day to day influence on decisions of state Grossman s forecast implied a sea change in the way citizens would interact with and participate in their representative government a revamping of the way Americans would do citizenship Harnessing the power of technology to promote the ideal of democracy that first pulsed through our nation over 230 years ago may be a feasible achievement in a technocratic age but whether technology can help achieve a revolution as seismic as the political one that our founding fathers initiated may be a practical impossibility Fusing the power

of technology and democratic ideals opens opportunities for greater access to information and offers a medium for people to be heard and express their voice with dissemination to the masses through digital tools such as blogs podcasts and wikis Indeed the emergence of the Internet as a nearly ubiquitous element of American society has brought about new opportunities to enhance citizen engagement in democratic politics and to increase the level of civic engagement among American citizens Despite such rhetoric however research has indicated that Grossman s electronic republic has for the most part failed to come to fruition
