Emergent Urbanism Tigran Haas, Krister Olsson, 2016-04-29 In the last few decades many European and American cities and towns experienced economic social and spatial structural change Strategies for urban regeneration include investments in infrastructures for production consumption and communication as well as marketing and branding measures and urban design schemes Bringing together leading academics from across a range of disciplines including Douglas Kelbaugh Ali Madanipour Saskia Sassen Gregory Ashworth Nan Elin Emily Talen and many others *Emergent Urbanism* identifies the specific issues dominating today's urban planning and urban design discourse arguing that urban planning and design not only results from deliberate planning and design measures but how these combine with infrastructure planning and derive from economic social and spatial processes of structural change Combining explorations from urban planning urban theory human geography sociology urban design and architecture the volume provides a comprehensive and state of the art overview highlighting the complexities of these interactions in space and place process and design

Istanbul Noah Billig, 2018-10-03 *Istanbul Informal Settlements and Generative Urbanism* analyzes two informal housing settlements in Istanbul Turkey Karanfilk y and Fatih Sultan Mehmet to examine how generatively built structures and neighbourhoods can be successfully realized in a modern burgeoning urban context Generative development processes adapt to existing conditions and unfold over time but there have been relatively few examples in the 20th and 21st centuries This book evaluates the constructs of living structures

pattern languages and generative urban design processes in relation to Istanbul's informal settlements. It provides examples of communities making liveable, dynamic and user-adapted neighbourhoods and establishes them as a modern settlement typology in generative urban design theory.

Applied Urban Design Philip Black, Michael Martin, Robert Phillips, Taki Sonbli, 2024-09-12. Applied Urban Design combines why we design and who we design for with how we design by providing the reader with a comprehensive and accessible bespoke framework for both understanding and practicing urban design in a contextually responsive manner from appraisal to design delivery. The framework is presented across four distinct steps covering analysis at strategic and local scales, the urban design program, design development and technical design. The authors unpack the functional blueprints, liveable qualities, contextual dynamics and technical components of quality urban design, identifying the role of urban designers in shaping spaces and places across differing local contexts through a responsive and multiscalar approach. International best practice examples and two original live case studies in Aalborg, Denmark and Manchester, UK demonstrate the application of the framework across differing scales and contexts, each supported by authors' own images and graphics that illustrate the broad range of urban design visualisation techniques and methods. Visually compelling and insightful, Applied Urban Design is for all who seek to understand demand and create people-centred, high quality, contextually responsive places and spaces.

Urban Maps Richard Brook, Nick Dunn, 2016-12-05. This book concerns the city and the devices that define the urban environment by their presence, representation or interpretation. The texts offer an interdisciplinary discourse and critique of the complex systems, artifacts, interventions and evidences that can inform our understanding of urban territories on surfaces in the margins or within voids. The diverse media of arts practices as well as commercial branding are used to explore narratives that reveal latent characteristics of urban situations that conventional architectural inquiry is unable to do. The subjects covered are presented within a wider framework of urban theory into which are embedded case study examples that outline the practices, processes and interpretations of each theme. The chapters provide a contemporary reading of urban socio-cultural conditions using mapping as a lens to explore and communicate the social phenomena and lived experiences of the dynamic and temporal city. Mapping is developed as a form of critical instrumentality to expose record and contribute to the understanding of the singular essences of space, place and networks by thematic, cognitive and experiential modes of investigation.

Transitioning to Sustainable Cities and Communities Hubert Klumpner, Klearjos Eduardo Papanicolaou, Georgeen Theodore, 2024-11-14. In developing alternative approaches to urban development in response to the societal challenge of living in ever-expanding cities, this Volume on the SDG11 Sustainable Cities and Communities proposes the concept of an Urbanising Earth. We question the dominant model of Western cities and their resultant global warming leading to the replacement of natural environments with artificial ones. The Volume features over twenty practical and metaphorical cases from experienced practitioners to emerging design thinkers, each of whom offer interconnected reflections on the research

design and implementation of projects anchored in architecture and design arguments promoting a more balanced view of the built and natural environment These reflections designed to engage readers highlight the collective effort needed for sustainable urban development The Volume aims to facilitate design as a learning process for society to reconcile human and environmental rights while celebrating the art of cultivating and living in this urban age The right to education and housing can create synergies providing parks and public spaces to underprivileged neighbourhoods The overall aim is to connect thinking with actions while considering what modernism in architecture and urban planning is today In doing this the Volume sheds light on the condition of contemporary design itself We draw from limitless approaches to the fundamental challenges and critical discussions presented to us by this Urbanising Earth *The Urbanism Reader* Stefan Al, Tom

The Handbook of Urban Morphology Karl Kropf,2018-04-02 The Handbook of Urban Morphology Karl Kropf Urban morphology is a core discipline for both academic research and professional practice in a range of fields including urban

design architecture planning geography archaeology and anthropology It plays a central role in improving our understanding of the built environment as a diverse complex structure that is the product of ongoing social processes and serves as our own habitat Conceived as a practical manual of morphological analysis The Handbook of Urban Morphology brings together in one place the core concepts and principles of the discipline specific up to date guidance on analytical methods with clear step by step instructions and case studies demonstrating specific applications in research and professional practice Illustrative material includes examples from Iran China Turkey Brazil France Italy the UK and the US with case studies covering applications in theoretical morphology environmental performance historical characterisation socio cultural investigations planning and design The result lays the foundation for taking forward and reconciling what might seem to be different views of urban form It provides a common basis for seeing the built environment as a quasi natural emergent phenomenon the material and medium of urban design a repository of embodied ideas and the cultural expression of the societies that produce it

Designing the Complex City Elena Porqueddu, 2025-08-08 How can designers address the emergent self organizing nature of complex urban environments Designing the Complex City highlights how both an excess and a lack of design control might contrast the lively complexity of cities their adaptive and evolutionary capacity By using key concepts from systems thinking complexity sciences life sciences cognitive sciences and social sciences the book frames a systemic spatial design approach aimed at enhancing the potential of different spatial design disciplines to navigate place specific emergent transformations without overdetermining their formal outcome A range of heterogeneous case studies developing at different scales show how embracing a design approach that is embodied open ended contextually responsive incremental and adaptive does not question the relevance of designers specific skills in shaping the physical structure of cities it may rather increase their potential to effectively intervene in complex adaptive cycles of urban decay and self regeneration Designing the Complex City provides insights for students researchers and academics in architecture interior design urban and landscape design planning theory and urban studies It is essential reading for all designers who seek to proactively and meaningfully intervene in spontaneous socio spatial dynamics

Driverless Urban Futures AnnaLisa

Meyboom, 2018-12-07 Since the industrial revolution innovations in transportation technology have continued to re shape the spatial organization and temporal occupation of the built environment Today autonomous vehicles AVs also referred to as self driving cars represent the next disruptive innovation in mobility with particularly profound impacts for cities At a moment of the fast paced development of AVs by auto making companies around the world policymakers planners and designers need to anticipate and address the many questions concerning the impacts of this new technology on urbanism and society at large Conceived as a speculative atlas a roadmap to unknown territories this book presents a series of drawings and text that unpack the potential impacts of AVs on scales ranging from the metropolis to the street The work is both grounded in a study of the history of urban transportation and current trajectories of technological innovation and informed by an open ended

attitude of future envisioning and design Through the drawings and essays *Driverless Urban Futures* invites readers into a debate of how our future infrastructure could benefit all members of the public and levels of society **Street Computing** Marcus Foth,Markus Rittenbruch,Ricky Robinson,Stephen Viller,2016-04-08 This book develops tools and techniques that will help urban residents gain access to urban computing Metaphorically speaking it is taking computing to the street by giving the general public rather than just researchers and professionals the power to leverage available city infrastructure and create solutions tailored to their individual needs It brings together five articles that are based on presentations given at the Street Computing Workshop held on 24 November 2009 in Melbourne in conjunction with the Australian Computer Human Interaction conference OZCHI 2009 This volume focuses on applying urban informatics urban and community sensing and open application programming interfaces APIs to the public space through the delivery of online services on demand and in real time It then offers a case study of how the city of Singapore has harnessed the potential of an online infrastructure so that residents and visitors can access services electronically This book was published as a special issue of the Journal of Urban Technology Introducing Urban Design Clara Greed,Marion Roberts,2014-10-14 Introducing Urban Design Interventions and Responses is a new departure in the town planning series under the editorship of Clara Greed The dynamic new subject and profession of urban design straddles the fields of town planning architecture landscape architecture and transport planning This book recognises that a key feature of modern urban design practice is the ability to integrate a concern with the visual and aesthetic aspects of urban form with a strong social awareness of the need of user groups plus a sensitivity to wider environmental and sustainability issues In this it continues the themes already introduced in earlier volumes such as the changing nature of the profession social problems and the means of implementing policy Written by a team of eminent urban designers architects and planners under the joint editorship of Clara Greed and Marion Roberts the book introduces the reader to the subject through a discussion of current issues approaches and user responses Introducing Urban Design Interventions and Responses is an ideal resource for undergraduate courses in town planning architecture landscape architecture estate management and housing studies It is also suitable as an introductory text for first year diploma and masters programmes in urban design and suitable for RTPI RICS CIOH CIOB ASI ISVA and RIBA courses and will be of interest to professional practitioners in the urban design field *Sverre Fehn and the City: Rethinking Architecture's Urban Premises* Stephen M. Anderson,2023-03-15 The urban attentions of Pritzker Laureate Sverre Fehn 1924 2009 are extensive but as yet virtually unexplored This book examines ten select projects to illuminate Fehn's approach to the city the embodiment of that thinking in his designs and the broader lessons those efforts offer for better understanding the relationship between architecture and urban life with unignorable implications for emergent urban architecture and its address of sociological and ecological crises Wary of large scale planning proposals or the erasure of existing urban patterns Fehn offered an uncommon and profoundly vibrant approach to urbanism at the scale of the single architectural project His

writings constructed buildings competition entries and lectures suggest opportunities for reinvigorating architecture's engagement with the city and provoke a rethinking of concepts foundational to its theorization. What is the nature of urbanity? What is the relationship of urbanity to the natural world? What is the role of architecture in the provision and sustenance of urban life? While exploring this territory will expand our knowledge of an architect central to key developments of late modernism, the range of the book and the arguments developed therein delineate far broader aims: a fuller understanding of architecture's urban promise.

The Dialectics of Urban and Architectural Boundaries in the Middle East and the Mediterranean Suzan Girginkaya Akdağ, Mine Dinçer, Meltem Vatan, Ümran Topçu, İrem Maro Kırış, 2021-06-01. This edited volume informs readers about changing norms and meanings of borders and underlines recent scenarios that shape these borders. It focuses mainly on the Mediterranean and Middle East regions through the following questions: What are the social, cultural, philosophical, political, economic, and aesthetic reasons for spatial segregation within contemporary territories and cities? In the world of globalization and networks, what are the new limitations of space? What are the alienating differences between interior and exterior, private and public, urban and rural, local and global, and real and virtual? Are spatial definitions and divisions more likely to be weakened if not totally erased by effects of globalization and mobility similar to the dissolution of borders between countries? Or are local practices and measures likely to become more apparent with emerging trends such as sustainability and identity? Authored by international scholars, all chapters are arranged under four main parts: Urban and Rural, Global and Local, Physical and Sensual, Real and Virtual. Hence, different concepts and definitions of borders along with varying methods and tools for questioning their essence in architectural and urban spaces will be introduced. For example, in the rural and urban context, environments, settlements, housing, landscape, transformation, conservation, and development; in the global and local context, styles, identity, universal design, sustainability, globalization, and networks, mobility, and migration; in the physical and sensual context, design studies and methodologies, environmental psychology, aesthetic reasoning, sense of place, and well-being; and in the real and virtual context, realities, tools, and communities are the main themes of the chapters. This book will be an essential source for professionals, scholars, and students of architecture and urban design with a view to understanding multidisciplinary perspectives in designing borders as well as the dialectical relationship between borders and space.
