Advanced Unsaturated Soil Mechanics Charles W.W. Ng,Chao Zhou,Junjun Ni,2024-10-24

Unsaturated soil is a three phase material that is ubiquitous on the Earth s surface and exhibits complex behaviour which becomes more complex in response to the Earth s changing climate and increasing engineering activities This is because the

former affects its moisture and temperature conditions significantly and the latter governs its stress state and suction condition This book is designed to meet the increasing challenges of climate change and engineering activities by covering the mechanics and engineering of unsaturated soil in a logical manner It comprises four major parts Water retention and flow characteristics Shear strength and stiffness at various temperatures State dependent elasto plastic constitutive modelling Field monitoring and engineering applications This second edition uniquely covers fundamental topics on unsaturated soil that are not covered in other similar books including the state dependency of soil water retention behaviour and water permeability functions such as dependence on engineering activities small strain stiffness considering the influence of wetting drying cycles and recent suction history such as that due to climate change suction effects on dilatancy and peak shear strength cyclic thermal effects on soil behaviour state dependent elastoplastic constitutive modelling of monotonic and cyclic behaviour engineering applications such as the South to North Water Transfer Project an earthen landfill cover system devoid of geomembrane in the Xiaping landfill Shenzhen and a 15 m deep multi propped excavation in Tianjin China

Boulon, 1995-01-30 The subject of geomaterial interfaces recognizes the important influences of the interface behaviour on the performance of interfaces involving cementaceous materials such as concrete and steel ice structure interfaces concrete rock interfaces and interfaces encountered in soil reinforcement During the past two decades the subject of geomaterial interfaces has attracted the concerted attention of scientists and engineers both in geomechanics and applied mechanics These efforts have been largely due to the observation that the conventional idealizations of the behaviour of interfaces between materials by frictionless contact bonded contact Coulomb friction or finite friction tend to omit many interesting and important influences of special relevance to geomaterials The significant manner in which non linear effects dilatancy contact degradation hardening and softening etc can influence the behaviour of the interface is borne out by experimental evidence As a result in many instances the response of the interface can be the governing criterion in the performance of a geomechanics problem The primary objective of this volume is to provide a documentation of recent advances in the area of geomaterial interfaces The volume consists of subject groupings which cover ice structure soil structure and steel concrete interfaces mechanics of rock and concrete joints and interfaces in discrete systems      Numerical Models in Geomechanics G.N. Pande, S. Pietruszczak, 2004-08-15 Reflecting the current research and advances made in the application of numerical methods in geotechnical engineering this volume details proceedings of the Ninth International Symposium on Numerical Models in Geomechanics NUMOG IX held in Ottawa Canada 25-27 August 2004 Highlighting a number of new developments in the area papers concentrate upon the following four main areas constitutive relations for geomaterials numerical algorithms formulation and performance modelling of transient coupled and dynamic problems application of numerical

techniques to practical problems Representing the most advanced modern findings in the field Numerical Models in Geomechanics is a comprehensive and impeccably researched text ideal for students and researchers as well as practising engineers Empirical Translation Studies Gert De Sutter,Marie-Aude Lefer,Isabelle Delaere,2017-05-08 The present volume is devoted to the study of language use in translated texts as a function of various linguistic contextual and cognitive factors It contributes to the recent trend in empirical translation studies towards more methodological sophistication including mixed methodology designs and multivariate statistical analyses ultimately leading to a more accurate understanding of language use in translations
