Khromov, Igor Carron, 2012-12-06 The VOLGA conferences hosted in odd numbered years by the Department of Theoretical and

Experimental Reactor Physics of the Moscow Engineering Physics Institute MEPhI are some of the most prestigious technical meetings held in Russia. Traditionally these conferences present the opportunity for reactor physicists from around the world to gather at MEPhI's holiday camp on the banks of the Volga river near Tver to exchange ideas and explore innovative concepts related to nuclear power development. In 1997 NATO became involved in the VOLGA meetings for the first time by co-sponsoring VOLGA97 as an advanced research workshop. This workshop broke with tradition a bit in that the venue was moved from MEPhI's holiday camp to a location nearer Moscow. The workshop program was effectively organized in order to cover a broad range of topics relating to the theme of the meeting. Generally the papers concerned safety-related questions associated with utilizing both weapons-grade and reactor-grade plutonium in the nuclear fuel cycle including facility requirements, licensing issues, proliferation risks and a variety of advanced concepts for alternative fuel cycles. The program contained a total of ninety-nine papers presented in five days of sessions.

A Beginner's History of Philosophy (Vol. 1&2)  
Herbert Ernest Cushman, 2023-11-23  
Herbert Ernest Cushman's *A Beginner's History of Philosophy Vol 1 2* offers a comprehensive and accessible exploration of philosophical thought from antiquity to modern times. Cushman's pedagogical style is characterized by clarity and conciseness, making complex ideas digestible for novices. The work is organized chronologically, allowing readers to engage with the evolution of philosophical concepts whilst situating them within their historical contexts. This dual volume serves not only as a primer for those new to philosophy but also as a reference for seasoned scholars seeking to revisit foundational ideas presented in a straightforward manner. Cushman, an esteemed educator and philosopher, dedicated much of his career to the dissemination of philosophical knowledge. His teaching experience and passion for philosophy informed his approach in writing these volumes, aiming to inspire a love for philosophical inquiry among students and lay readers alike. His background reflects an era that sought to make philosophy more democratized and accessible, countering prevailing notions that such discourse was reserved solely for the elite. This book is highly recommended for anyone seeking to understand the trajectory of philosophical thought regardless of prior knowledge. Cushman's engaging narrative not only fosters intellectual curiosity but also encourages readers to reflect critically on the ideas that have shaped human understanding throughout history.

**The Nuclear Power Decisions** Roger Williams, 2019-03-27  
Originally published in 1980, more so than any other energy resource, nuclear power has the capacity to provide much of our energy needs but is highly controversial. This book discusses the major British decisions in the civil nuclear field and the way they were made between 1953 and 1978. It spans the period between the decision to construct Calder Hall, claimed as the world's first nuclear power station, and the Windscale Inquiry, claimed as the world's most thorough study of a nuclear project. For the period up to 1974, this involves a study of the internal processes of British central government. The private issues include the technical selection of nuclear reactors, the economic arguments about nuclear power, and the political clashes between institutions and individuals. The public issues concern nuclear safety and the

environment and the rights and opportunities for individuals and groups to protest about nuclear development The book demonstrates that British civil nuclear power decision making had many shortcomings and concludes that it was hampered by outdated political and administrative attitudes and machinery and that some of the central issues in the nuclear power debate were misunderstood by the decision makers themselves *Individual-Based Models and Approaches In Ecology* D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages sizes and degrees of fitness Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences Individual based models are of great use in the areas of aquatic ecology terrestrial ecology landscape or physiological ecology terrestrial ecology landscape or physiological ecology and agriculture This book discusses which biological problems individual based models can solve as well as the models inherent limitations It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use The book also details specific applications to theory and management *Designing and Developing Programs for Gifted Students* Joan F. itself is an outstanding example of such cooperation The aim of the book is to describe and analyse crop production in greenhouses in relation to climate control to redefine the problem of optimal control from a theoretical point of view and to provide a suitable framework for the design of new scientifically based control systems Though the principles are generally applicable they are discussed against the background of the Dutch greenhouse industry To provide the reader with some background information the historical developments and the economic position of the Dutch horticultural industry are briefly reviewed in the introductory chapter this book will certainly become a reference as such an extensive review on the greenhouse crop system and its control is lacking for research and teaching Scientia Horticultura
