INSTRUCTIONS FOR CANDIDATES

Attempt any five questions.

Q.1. (a) "An increase in the rate of saving has now impact on the per capita rate of growth in the basic Solow model (without technical progress) while it cause an increase in the rate of per capital growth in the AK model". Elaborate, by distinguishing between the basic assumptions underlying the two models.

Ans. (a) Solow used a binear homogenous production function where MP_L and MP_K falls as labour and capital increase respectively. It shows that additional production of labour and capital is decreasing. At the stage of steady state growth rate of per capita stock and output is zero, when we assuming there is no technical progress.

AK assume that there is absence of diminishing returns to capital. The marginal product of each unit of capital is always A and it remain unchanged as additional capital is put in place.

$$\frac{\Delta y}{y} = \frac{S}{k}$$

where $S = \frac{S}{k}$
 $k = \frac{k}{y}$

We assume that labour growth rate is n , the rate of growth of per capita output is

$$\left[\frac{S}{k} - n \right]$$

It increase as n increase while in Solow model, rate of growth of per capita income is '0'. Constant and diminishing return to capital is the assumption that differentiates both the models.

Q.1. (b) In the Slow Model, without technical change but a constant rate of growth of population, assume an economy in steady state at time

Private Equity at Work Eileen Appelbaum, Rosemary Batt, 2014-03-31 Private equity firms have long been at the center of public debates on the impact of

the financial sector on Main Street companies Are these firms financial innovators that save failing businesses or financial predators that bankrupt otherwise healthy companies and destroy jobs The first comprehensive examination of this topic Private Equity at Work provides a detailed yet accessible guide to this controversial business model Economist Eileen Appelbaum and Professor Rosemary Batt carefully evaluate the evidence including original case studies and interviews legal documents bankruptcy proceedings media coverage and existing academic scholarship to demonstrate the effects of private equity on American businesses and workers They document that while private equity firms have had positive effects on the operations and growth of small and mid sized companies and in turning around failing companies the interventions of private equity more often than not lead to significant negative consequences for many businesses and workers Prior research on private equity has focused almost exclusively on the financial performance of private equity funds and the returns to their investors Private Equity at Work provides a new roadmap to the largely hidden internal operations of these firms showing how their business strategies disproportionately benefit the partners in private equity firms at the expense of other stakeholders and taxpayers In the 1980s leveraged buyouts by private equity firms saw high returns and were widely considered the solution to corporate wastefulness and mismanagement And since 2000 nearly 11 500 companies representing almost 8 million employees have been purchased by private equity firms As their role in the economy has increased they have come under fire from labor unions and community advocates who argue that the proliferation of leveraged buyouts destroys jobs causes wages to stagnate saddles otherwise healthy companies with debt and leads to subsidies from taxpayers Appelbaum and Batt show that private equity firms financial strategies are designed to extract maximum value from the companies they buy and sell often to the detriment of those companies and their employees and suppliers Their risky decisions include buying companies and extracting dividends by loading them with high levels of debt and selling assets These actions often lead to financial distress and a disproportionate focus on cost cutting outsourcing and wage and benefit losses for workers especially if they are unionized Because the law views private equity firms as investors rather than employers private equity owners are not held accountable for their actions in ways that public corporations are And their actions are not transparent because private equity owned companies are not regulated by the Securities and Exchange Commission Thus any debts or costs of bankruptcy incurred fall on businesses owned by private equity and their workers not the private equity firms that govern them For employees this often means loss of jobs health and pension benefits and retirement income Appelbaum and Batt conclude with a set of policy recommendations intended to curb the negative effects of private equity while preserving its constructive role in the economy These include policies to improve transparency and accountability as well as changes that would reduce the excessive use of financial engineering strategies by firms A groundbreaking analysis of a hotly contested business model Private Equity at Work provides an unprecedented analysis of the little understood inner workings of private equity and of the effects of leveraged buyouts on American
