Facilities Management Towards Best Practice:

Facilities Management Peter Barrett, David Baldry, 2009-02-18 Facilities management has been one of the fastest growing professional disciplines for some years both in terms of volume and diversity of commercial activity. However, a widely accepted and implemented body of knowledge is still lacking. This book contributes to that knowledge building by taking models and ideas from a wide range of sources and linking them to extensive case study material drawn from practising facilities managers. The text is divided into three parts. Current practice is illustrated with a second chapter looking at enhancing services. Key facilities management issues are considered: user needs evaluation, outsourcing, and computer based information systems. Extensive advice is provided on managing people through change and on decision making. The Second Edition features new material on user needs briefing and procurement strategy together with new public sector case studies. This high quality book provides a comprehensive approach to the range of issues and the combination of case studies with theoretical perspectives and research has a strong practical emphasis. Chartered Surveyor Monthly. A thorough and very well researched book as a student text, it is first class. Construction Manager. **Facilities Management** Peter Barrett, 1998

Infrastructure for the Built Environment Rodney

Howes, Herbert Robinson, 2005 Throughout the world there is a growing demand for high quality public services to support socio economic development Infrastructure is central to improving the level of public services and the quality of the built environment But in key areas such as transport energy water healthcare education and communications public resources are not sufficient to keep pace with this demand As the public sector struggles to keep up the private sector is increasingly involved in the procurement of economic and social infrastructure Until now procurement strategies have often concentrated on the mechanisms and the bricks and mortar without a thorough analysis of the processes and their implications for services The result is that all too often infrastructure projects are implemented in an ad hoc and fragmented way In this ground breaking book Rodney Howes and Herbert Robinson provide a holistic approach to infrastructure provision that facilitates infrastructure delivery aimed at continuously improving the level and quality of services Critical issues of policy and strategy implementation and operational aspects are examined within the context of sustainability By emphasising the importance of procuring infrastructure within an overall national or regional development policy and strategy the authors have demonstrated the importance of linking investment and resource decisions to local social economic and environmental needs
