Finite Element Methods in Mechanics Noboru Kikuchi,1986-06-12 This is a textbook written for mechanical engineering students at first year graduate level As such it emphasizes the development of finite element methods used in applied mechanics The book starts with fundamental formulations of heat conduction and linear elasticity and derives the weak form i e the principle of virtual work in elasticity from a boundary value problem that represents the mechanical behaviour of solids and fluids Finite element approximations are then derived from this weak form The book contains many useful exercises and the author appropriately provides the student with computer programs in both BASIC and FORTRAN for solving them Furthermore a workbook is available with additional computer listings and also an accompanying disc that contains the BASIC programs for use on IBM PC microcomputers and their compatibles Thus the usefulness and versatility of this text is enhanced by the student s ability to practise problem solving on accessible microcomputers **Fluid Mechanics**

Experiments Robabeh Jazaei,2022-05-31 Fluid mechanics is one of the most challenging undergraduate courses for engineering students The fluid mechanics lab facilitates students learning in a hands on environment The primary objective of this book is to provide a graphical lab manual for the fluid mechanics laboratory The manual is divided into six chapters to cover the main topics of undergraduate level fluid mechanics Chapter 1 begins with an overview of laboratory objectives and the introduction of technical laboratory report content In Chapter 1 error analysis is discussed by providing examples In Chapter 2 fluid properties including viscosity density temperature specific weight and specific gravity are discussed Chapter 3 revolves around the fluid statics include pressure measurement using piezometers and manometers Additionally hydrostatic pressure on the submerged plane and curved surfaces as well as buoyancy and Archimedes Principle are examined in Chapter 3 In Chapter 4 several core concepts of fluid dynamics are discussed This chapter begins with defining a control system based on which momentum analysis of the flow system is explained The rest of the chapter is allotted to the force acting on a control system the linear momentum equation and the energy equation Chapter 4 also covers the hydraulic grade line and energy grade line experiment The effect of orifice and changing cross sectional area by using Bernoulli s equation is presented in Chapter 4 The application of the siphon is extended from Chapter 4 by applying Bernoulli s equation The last two chapters cover various topics in both internal and external flows which are of great importance in engineering design Chapter 5 deals with internal flow including Reynolds number flow classification flow rate measurement and velocity profile The last experiment in Chapter 5 is devoted to a deep understanding of internal flow concepts in a piping system In

this experiment students learn how to measure minor and major head losses as well as the impact of piping materials on the hydrodynamics behavior of the flow Finally open channels weirs specific energy and flow classification hydraulic jump and sluice gate experiments are covered in Chapter 6

Goal Oriented Learning Environments Horace Moo-Young, Timothy Fortner, 2003 E learning encompasses many things to many people Elliot Massie a leading e learning guru states that Online learning is not about taking a course and putting it on desktop It encompasses Combination of learning services and technology to provide high value integrated learning anytime and anyplace GOLE aims to create a virtual learning simulator that is capable of customizing the pedagogy to the learners learning style To properly design learn by doing scenarios the learning environment must balance the learning objectives with authenticity The key is to build a realistic environment which is complex enough to promote expectation failure and robust enough to support the learner at that point Two of the major learning objectives for a goal oriented learning environment are the application of facts and building specific skills The purpose of this research was to design develop implement and assess a Goal Oriented Learning Environment GOLE into the Civil and Environmental Engineering curriculum at Lehigh University Also to design develop implement and assess Internet based instructional systems into the CEE curriculum To achieve these objectives a GOLE was implemented into two courses that were used as case studies in this research These case studies describe the instructional design method utilized and the assessment involved to evaluate the courses The instructional design method utilized nine steps Discuss Determine Decide Design Develop Implement Assessment Evaluation and Evolve The designing of GOLE focused on content delivery platform character development and story line In order to assess and evaluate the GOLE a series of five evaluations were created in order perform the analysis skill matrix course performance website evaluations and the DISC profile The data was then analyzed to determine what parts of the course were effective
