Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two question were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human endeavour Rapid Screening for Organic Pollutants Analysis in Food Xiuxiu Dong, Sujun Guan, Lin Luo, Xixia Liu, Derek Hao , Yiming Zhang, 2025-01-02 Analyzing organic pollutants in food such as pesticides pathogenic bacteria and toxins is critical to ensuring global food security Implementing reliable effective and rapid screening methods can ensure the accuracy of analytical results improve the efficiency of analysis and contribute to strengthening food safety supervision thus promoting the sustainable development of the food system In recent years efficient sensing methods have attracted extensive attention including colorimetry fluorimetry surface enhanced Raman spectroscopy electrochemistry and photoelectrochemistry In addition and more importantly the rapidly emerging research field of nanotechnology to deploy nanomaterials provides exciting new possibilities for enhancing the performance of analytical methods e g lower detection limit wider detection linear range in bioanalytical and biotechnological applications Therefore applying nanomaterials to sensing platforms is essential for efficient sensor development **CCEA Chemistry AS Student Unit Guide: Unit 2 Further Physical and Inorganic Chemistry and Introduction to Organic Chemistry ePub** Alyn G.
