Dutch Committee Proposes to Build Steve Jobs' iPad-Equipped Classroom

Friday March 23, 2012 10:23 am PST by Jordan Jones

In his biography of Steve Jobs, Walter Isaacson shared a story of Jobs meeting with U.S. President Barack Obama. Along with sharing his disapproval of the difficulty in building a future in the United States, he also disseminated America's education system.

“It was absurd, he added that American classrooms were still based on teachers standing at a board and using textbooks. All books, learning materials, and assessments should be digital and interactive, tailored to each student and providing feedback in real time.”

Jobs wanted to hire great textbook writers to create digital versions, and make them a feature of the iPad. He wanted to make textbooks free and bundled with the iPad, and believed such a system would give students the opportunity to learn more.

Good computer books make assumptions about the reader: what they do and don't know when they pick up the book and what they want to know when they put it down. For each reader, this could be very different. Therefore, a book that suits one person may not be the best for another. *Mac OS X Leopard Beyond the Manual* makes some assumptions, too: ones that tend to differ from other Mac OS X books. First of all, we assume that you have used a computer in the past, that you know how to use a mouse and you know the proper place to stick a DVD to get it to play in your computer. We won't be showing you these things. We will, however, demonstrate to our Mac converts how to right-click on a trackpad with only one button. Second, we assume you know what you want to do with your computer. We won't waste your time showing you specifically step-by-step how to order a pizza from Pizza Galaxy in Milwaukee, Wisconsin, with Safari, though when you're done with this book we think you'll be able to do this just fine if such a place exists anyway. Finally, we assume that you are a reasonably intelligent person who realizes the value of such phrases as "Give a man a fish, you have fed him for today; Teach a man to fish, and you have fed him for a

lifetime and can imagine how that might apply to a computer book. If this sounds like you then we think you'll find this book rewarding. Inside you will find everything you need to get up to speed with Mac OS X Leopard including Using the standard included Leopard applications including Mail Safari Preview and more Taking advantage of the Darwin subsystem in Leopard Learning all the ins and outs of the Finder and Leopard's improved interface Administering your computer for yourself and for others Working with other computers and operating systems from you Mac Configuring the network to take full advantage of the powerful networking capabilities in Leopard Working with add on devices via USB Firewire and Bluetooth Effectively implementing data backup recovery and security Getting started with OS X development in Leopard **My New Mac**
